## ABSTRACT

This 29th annual report summarizes results of the 1994-95 Survey of Earned Doctorates (SED), which collected data from graduates as they completed requirements for their doctoral degrees. The survey found that a record 41,610 doctorates were awarded by U.S. universities from July 1, 1994, through June 30, 1995. Over 88 percent of these were Ph.D.s, while more than two-thirds of the remainder were Ed.D.s or other doctorates in education. Women earned a record 16,333 doctorates, while U.S. minorities earned a record high of nearly 13 percent of doctorates awarded to U.S. citizens. The report also analyzes trends in doctorate production. Sixteen tables present data on number of doctorates awarded, gender and race/ethnicity of recipients, citizenship status, major fields, leading U.S. baccalaureate and doctoral institutions of minority recipients, levels of student debt, median years to doctorate, post-graduation commitments, and employment sector of recipients. A special section examines the contribution of China, India, Taiwan, and Korea to the growth of doctorates awarded to non-U.S. citizens between 1985 and 1995. Appendixes provide supplementary tables on 1995 doctoral recipients, trend data on 1985-95 doctoral cohorts, technical notes, and a copy of the survey questionnaire. (MDM)

## Highlights

The following data characterizing recipients of research doctorates awarded by U.S. universities from July 1, 1994, through June 30, 1995, are derived from the 1995 Survey of Earned Doctorates, an annual census of new doctorate recipients:

- The number of new Ph.D.s reached a record high of 41,610 in 1995: 7,913 in life sciences; 6,806 in physical sciences; 6,623 in social sciences; 6,546 in education; 6,007 in engineering; 5,061 in humanities; and 2,654 in professional/other fields.
- Women earned a record number of Ph.D.s (16,333 in 1995). Women outnumbered men in education and, for the first time, in social sciences. Doctorate awards to men surpassed those to women in every other broad field; women were most outnumbered in the field of engineering.
- U.S. minorities—Asians, blacks, Hispanics, and American Indians—earned a record high of almost 13 percent of doctorates awarded to U.S. citizens in 1995. Each U.S. minority group also reached its highest number and proportion of new Ph.D.s in 1995. Asians and blacks experienced large increases over 1994—19.9 percent and 17.5 percent, respectively. Fields with the largest percentage of minorities were education, in which blacks were the predominant minority group, and engineering, in which Asians were.
- In 1995, median time-to-degree for Ph.D. recipients was 10.9 years since the baccalaureate and 7.2 years since first enrollment in any graduate program. University funding was the primary source of support for the majority of 1995 Ph.D.s. Almost half of Ph.D.s reported debt related to undergraduate and graduate education.
- A smaller proportion of Ph.D.s in 1995 than before reported definite postgraduation commitments. Of those with definite commitments, a smaller proportion of Ph.D.s planned to be employed and a larger proportion planned postdoctoral study than previously. Continuing a trend that began in 1992, women outnumbered men in 1995 among those Ph.D.s with definite commitments at the time the doctorate is earned for employment in academia.
- U.S. citizens accounted for the entire increase in doctorate awards from 1994 to 1995. The number of U.S. citizens earning Ph.D.s increased by 474. The number of non-U.S. citizens decreased by 41, their first decline in numbers since the mid-1970s.
- Between 1985 and 1995, non-U.S. citizens earning Ph.D.s doubled in number, accounting for almost two-thirds of the growth in doctorates during that period. Despite the small decline in number from 1994 to 1995, non-U.S. citizens comprised 32 percent of Ph.D.s in 1995, with almost 60 percent in engineering and 45 percent in physical sciences.
- Increases in Ph.D.s awarded to citizens of the four leading non-U.S. countries of citizenship—China, India, Taiwan, and Korea—spurred recent growth among non-U.S. Ph.D.s. In 1985 these countries accounted for 29 percent of non-U.S. Ph.D.s; in 1995 they accounted for 55 percent. A special section in this report, though, reveals important differences among citizens of these four countries in number of Ph.D.s, fields of study, financial support, visa status, postgraduation commitments for work or further study, and postgraduation location.

OFFICE OF SCIENTIFIC AND ENGINEERING PERSONNEL  
NATIONAL RESEARCH COUNCIL

NATIONAL ACADEMY PRESS  
Washington, D.C. 1996

NOTICE: The project that is the subject of this report was approved by the Governing Board of the National Research Council, whose members are drawn from the councils of the National Academy of Sciences, the National Academy of Engineering, and the Institute of Medicine. The survey project is part of the program of the Office of Scientific and Engineering Personnel (OSEP).

This report has been reviewed by a group of persons other than the authors according to procedures approved by a Report Review Committee consisting of members of the National Academy of Sciences, the National Academy of Engineering, and the Institute of Medicine.

The National Academy of Sciences is a private, nonprofit, self-perpetuating society of distinguished scholars engaged in scientific and engineering research, dedicated to the furtherance of science and technology and to their use for the general welfare. Under authority of the charter granted by Congress in 1863, the Academy has a mandate that requires it to advise the federal government on scientific and technical matters. Dr. Bruce M. Alberts is president of the National Academy of Sciences.

The National Academy of Engineering was established in 1964, under the charter of the National Academy of Sciences, as a parallel organization of outstanding engineers. It is autonomous in its administration and in the selection of its members, sharing with the National Academy of Sciences the responsibility for advising the federal government. The National Academy of Engineering sponsors engineering programs aimed at meeting national needs, encourages education and research, and recognizes the superior achievements of engineers. Dr. William A. Wulf is interim president of the National Academy of Engineering.

The Institute of Medicine was established in 1970 by the National Academy of Sciences to secure the services of eminent members of appropriate professions in the examination of policy matters pertaining to the health of the public. The Institute acts under the responsibility given to the National Academy of Sciences by its congressional charter to be an adviser to the federal government and, upon its own initiative, to identify issues of medical care, areas of research, and topics for education. Dr. Kenneth I. Shine is president of the Institute of Medicine.

The National Research Council (NRC) was organized by the National Academy of Sciences in 1916 to associate the broad community of science and technology with the Academy's purposes of furthering knowledge and of advising the federal government. Functioning in accordance with general policies determined by the Academy, the Council has become the principal operating agency of both the National Academy of Sciences and the National Academy of Engineering in providing services to the government, the public, and the scientific and engineering communities. The Council is administered jointly by both Academies and the Institute of Medicine. Dr. Bruce M. Alberts and Dr. William A. Wulf are chairman and interim vice-chairman, respectively, of the National Research Council.

This report is based on research conducted by OSEP with the support of the National Science Foundation (NSF), the National Institutes of Health (NIH), the National Endowment for the Humanities (NEH), the U.S. Department of Education (U.S. Dept. of Ed.), and the U.S. Department of Agriculture (USDA) under NSF Contract No. SRS-9309720. Opinions, findings, conclusions, or recommendations expressed in this publication are those of OSEP and do not necessarily reflect the views of the sponsoring agencies.

## PREFACE AND ACKNOWLEDGMENTS

This report presents a summary of the results of the 1994-1995 Survey of Earned Doctorates (SED), which has been conducted each year since 1958 by the National Research Council's (NRC) Office of Scientific and Engineering Personnel (OSEP) and its predecessor organizations. Questionnaires distributed with the cooperation of the graduate deans of U.S. universities are filled in by graduates as they complete requirements for their doctoral degrees. The doctorates are reported by academic year (from July 1 of one year through June 30 of the following year) and include *research* and *applied-research doctorates* in all fields.<sup>1</sup> Doctoral degrees such as the Ph.D., D.Sc., and Ed.D. are covered by this survey; professional degrees (e.g., M.D., D.D.S., J.D., Psy.D.) are not. A full list of included degrees can be found inside the back cover. For convenience throughout this report, "Ph.D." is used to represent any of the doctoral degrees covered by the survey.

This *Summary Report* is the twenty-ninth in an annual series of reports that began in 1967.<sup>2</sup> All survey responses become part of the Doctorate Records File (DRF), a virtually complete database on doctorate recipients from 1920 to 1995. Almost 90 percent of the 1,185,855 records now in the DRF were created from results of the 1958-1995 surveys. For doctorates granted during the 1920-1957 period, information was compiled from commencement bulletins, registrars' records, and other published material.

The conduct of the SED, the maintenance of the resulting data file, and the publication of this report are funded jointly by the National Science Foundation (NSF), the National Institutes of Health (NIH), the National Endowment for the Humanities (NEH), the U.S. Department of Education (U.S. Dept. of Ed.), and the U.S. Department of Agriculture (USDA). The survey's relevance to national policy issues has increased, thanks to constructive reviews of the design and analysis of the survey by Paul Seder (NIH), Nancy Schantz (U.S. Dept. of Ed.), Peter Muscato (USDA), Jeffrey Thomas (NEH), and Mary Golladay and Susan Hill (NSF). Mary Golladay (NSF) also serves as the project officer for the five sponsoring agencies.

We would also like to acknowledge the graduate deans and their assistants in the doctorate-granting institutions for their interest and assistance. It is through their cooperation that the DRF continues to serve as a useful resource for monitoring developments in graduate

---

<sup>1</sup> The Survey of Earned Doctorates collects information on *research* doctorates only. This differs from the institutional collection of numbers of degrees done by the U.S. Department of Education on *all* doctorates. For an evaluation of the differences, see National Science Foundation, 1993, *Science and Engineering Doctorates 1960-1991*, NSF 93-301, Detailed Statistical Tables, Washington, D.C., Pp. 2-6.

<sup>2</sup> Trend data from earlier periods can be found in Lindsey R. Harmon, 1978, *A Century of Doctorates: Data Analysis of Growth and Change*, National Academy of Sciences, Washington, D.C.

education in the United States. Finally, we thank all of the doctorate recipients who have completed the SED over the years.

The 1994-1995 Survey of Earned Doctorates was conducted under the administrative supervision of Peter Henderson and Robert Simmons. Delores Thurgood supervised and reviewed survey closure. Dr. Henderson collaborated with Julie Clarke and Mary Reynolds on the development of this year's report. Dr. Henderson analyzed the survey results and drafted all text in the body of the report. He and Ms. Clarke produced the figures. Ms. Clarke and Dr. Reynolds generated the data from the Doctorate Records File. Ms. Clarke, Dr. Reynolds, and Martha Bohman prepared the final tables for the report. Ms. Clarke drafted the technical notes. Dr. Reynolds, Ms. Clarke, and Ms. Bohman reviewed the manuscript for accuracy.

Special appreciation is also expressed to the following NRC staff: Eileen Milner, manager of the unit responsible for collecting and processing the survey forms; John Hines, institutional coordinator; Gedamu Abraha and Kevin Kocur, coordinators of the follow-up effort; Joyce Hendrickson, Kevin Williams, Amy Dowd, and Barbara Schreiber, full-time coders; and the many hourly coders who contributed to processing the survey. Special thanks are also expressed to Joseph Finan, Cynthia Woods, and Daniel Fulwiler for their service on application development, project programming, database management, and computer operations.

The work of this project was overseen by the Advisory Committee of the Office of Scientific and Engineering Personnel, which is concerned with those activities of the NRC that contribute to effective development and utilization of the nation's scholars and research personnel. In addition, an advisory panel made recommendations on the improvement of this important survey. Charlotte Kuh, Executive Director of OSEP, and Marilyn Baker, Associate Executive Director, also provided helpful guidance. Suggestions for improvement of the content or format of the report, other comments, and questions are welcome and may be directed to the authors of this report.

Linda Wilson, Chair

29	Non-U.S. citizen doctorate recipients with definite commitments for postgraduation employment or postdoctoral study, by location in U.S. or abroad, 1985-1995	55
30	Doctorate recipients from the current four leading non-U.S. countries of citizenship with postgraduation commitments for employment or postdoctoral study, by postgraduation location, 1985-1995	57
31	Percentage of doctorate recipients from China and India with postgraduation commitments who had academic employment, industrial employment, or postdoctoral study in the United States, 1985-1995	58
32	Percentage of doctorate recipients from Taiwan and Korea with postgraduation commitments who had academic employment, industrial employment, non-U.S. government employment, or postdoctoral study abroad, 1985-1995	58
33	Non-U.S. citizen doctorate recipients seeking postgraduation employment or postdoctoral study, by location in U.S. or abroad, 1985-1995	60
34	Citizens of leading non-U.S. countries of citizenship seeking postgraduation employment or postdoctoral study, by location in U.S. or abroad, 1985-1995	61

## INTRODUCTION

*Summary Report 1995* is the twenty-ninth in a series of reports on research doctorates awarded by U.S. colleges and universities. Like its predecessors, this report presents trends in doctorate production in the United States, describing the general demographic characteristics of doctorate recipients and the seven broad fields in which they earned their degrees. Each of the seven broad fields consists of several "major" fields (e.g., biological sciences is a major field within the broad field of life sciences, psychology is a major field within the broad field of social sciences). The doctorate recipients themselves report their field of study and are counted accordingly. For a list of the fields discussed in this report, see the inside back cover and the specialties list in Appendix D. (Note: These field groupings may differ from those used by federal sponsors of the survey.)

The first section of *Summary Report 1995* presents brief narratives of key survey findings, accompanied by figures showing selected trend data. The numbers and percentages from which the figures were drawn are provided in a set of tables following the first section; relevant tables are referenced at the bottom of the figures. This section also includes major findings from data presented in tables but not in figures.

Although the main body of the report is similar in content to last year's, *Summary Report 1995* presents a special section on non-U.S. citizens that focuses on the contribution of leading non-U.S. countries of origin—China, India, Taiwan, and Korea—to what, until this year, has been a growing population of non-U.S. citizens earning doctorates from U.S. colleges and universities.

Supplementary tables on 1995 doctorate recipients are given in Appendix A, and trend data on the 1985-1995 Ph.D. cohorts are presented in Appendix B. Appendix C provides technical notes that include nonresponse rates and other information related to tables and figures in the body of the report. Appendix D contains a copy of the survey questionnaire.

Additional information is available from the Doctorate Records Project upon request. For a cost, the project offers tables on the baccalaureate origins of Ph.D.s by major field of doctorate and tables on the doctoral specialties of Ph.D.s by citizenship, race/ethnicity, and gender. Customized tables can also be prepared at cost. For more information, please contact:

\*\*\* IMPORTANT NOTICE \*\*\*

The estimates reported for the Survey of Earned Doctorates (SED) are simple tabulations of all available information with no adjustment for nonresponse. Therefore, differences in response rates from year to year can produce numerical fluctuations that are unrelated to real trends.

Historically, self-report rates to the SED have been at or above 95 percent in most years. The self-report rate declined to 92 percent during the 1980s, and, in an effort to improve it, the survey methodology was modified after 1989. Self-report rates have risen as hoped, stabilizing around 95 percent during the past four years (1991 to 1995). (*Self-report rates* indicate the proportion of questionnaires completed by doctorate recipients. The National Research Council obtains at least skeletal data on all research doctorates who do not complete the survey. These doctorates are not included in the self-report rates, but tables in this report incorporate data for the skeletal cases.) The self-report rate for 1995 may increase slightly next year if additional questionnaires are received from doctorate recipients. See page 137 in Appendix C for a table giving survey response rates from 1965 to 1995.

*Item* response rates have shown a parallel improvement since 1990—a natural consequence of the increase in the overall self-report rate, as well as a result of format revisions to the questionnaire and follow-ups for missing information. In 1990 new follow-up procedures were implemented to increase coverage of several variables: birth year, gender, race/ethnicity, citizenship status, country of citizenship, baccalaureate year and institution, and postgraduation plans. Response rates for these variables have since improved—especially for citizenship and race/ethnicity. The increased response rate to race/ethnicity has assured accuracy in the reported numbers of minority Ph.D.s.

The data for a given year are updated the following year with any responses received *after* survey closure. Postsurvey adjustment was most significant for 1990 and 1991 Ph.D.s, with the largest impact on the number of blacks. For both of these years, the total number of black Ph.D.s increased by about 7.5 percent in the year after survey closure. The survey cycle was then extended to allow receipt of more follow-up information before closure, resulting in much smaller postsurvey adjustments for 1992, 1993, and 1994 data (a 1.4 percent increase in black Ph.D.s for 1992, a 0.2 percent increase for 1993, and a 0.5 percent increase for 1994). The same is expected for 1995 data.

Adjustments to data are presented in reports subsequent to the initial report for a survey. Updates for 1993 appeared in *Summary Report 1994*, and those for 1994 are included in this year's report (see Appendix Table B-2 for adjustments to racial/ethnic data). The data for 1995 will likewise be subject to further revision, but, as for the last two years, adjustments are expected to be minimal. Updates to 1995 data will be presented in next year's report.

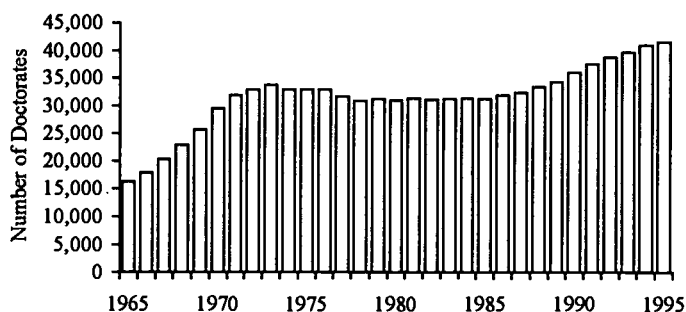

In using SED data the reader should keep in mind that numerical trends are affected by fluctuations in response rates. Increasing or decreasing numbers—especially in a citizenship or racial/ethnic group—reflect to some degree any change in both overall survey response and item response.

## TRENDS IN DOCTORATE RECIPIENTS

### Overall Increase in Doctorates

The number of new Ph.D.s granted by the 376 colleges and universities in the United States and Puerto Rico that award research doctorates increased to an all-time high of 41,610 in 1995.<sup>1</sup> This record continues the upward trend in doctoral attainment that started in 1986 after a period of stagnation during the late 1970s and early 1980s.

FIGURE 1 Doctorates awarded by U.S. colleges and universities, 1965-1995.

See Table 1, page 22.

SOURCE: National Research Council, Survey of Earned Doctorates.

This first part of the *Summary Report* on trends in doctorate recipients examines the trends behind this overall increase. The first three sections that follow focus on trends by gender, race/ethnicity (for U.S. citizens), and broad field. The section examining broad fields has subsections on gender and race/ethnicity. The first three sections are followed by sections examining time-to-degree, financial support during graduate school, postgraduation plans of doctorate recipients, and sectors of employment for doctorates who have definite employment commitments at the time the doctorate is earned.

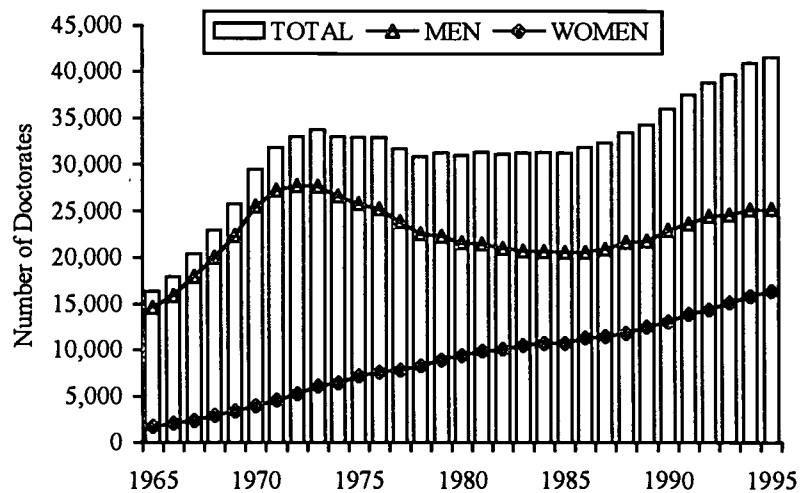

This year data on citizenship status is presented in a second part of the report focusing on the contribution of China, India, Taiwan, and Korea to the growth of non-U.S. Ph.D.s. Non-U.S. citizens account for much of the growth in the numbers of Ph.D.s in the past decade, and the growing number of Ph.D.s who are citizens of these four Asian countries account for most of the growth among non-U.S. Ph.D.s. The second part of the report examines the trends behind these increases. It also notes, however, that the number of non-U.S. Ph.D.s declined between 1994 and 1995 and suggests this may be the beginning of a new trend.

<sup>1</sup> "Ph.D." is used in this report to refer to the Doctor of Philosophy degree—and recipients of this degree—and to any of the other doctoral degrees covered by the survey. Over 88 percent of the degrees earned in 1995 were the Doctor of Philosophy. More than two-thirds of the remaining degrees were Ed.D.s or other doctorates in education. A full list of included degrees can be found inside the back cover.

### Gender

- In 1995 women once again earned a record number of Ph.D.s (16,333). This figure is nearly 10 times the number reported in 1965, when women earned 1,760 Ph.D.s. Women's representation among doctorate recipients jumped from 11 percent in 1965 to an all-time high of 39 percent in 1995.
- The number of men earning Ph.D.s increased to 25,277 in 1995. This figure is still short of the peak of 27,754 in 1972, after nearly doubling their numbers from the 14,580 earned in 1965.

FIGURE 2 Doctorate recipients, total and by gender, 1965-1995.

See Tables 1 and 2, page 22.

SOURCE: National Research Council, Survey of Earned Doctorates.

### **Race/Ethnicity**

U.S. minorities earned a record number of Ph.D.s in 1995, increasing from 3,070 awards in 1994 to 3,489 in 1995. Almost 13 percent of the doctorates awarded to U.S. citizens in 1995 were earned by racial/ethnic minorities—Asians, blacks, Hispanics, and American Indians—up from 11 percent in 1994.<sup>2</sup> The overall minority share of doctorates has increased by over six percentage points since 1976. (See Appendix Table B-2, pages 133-135.)

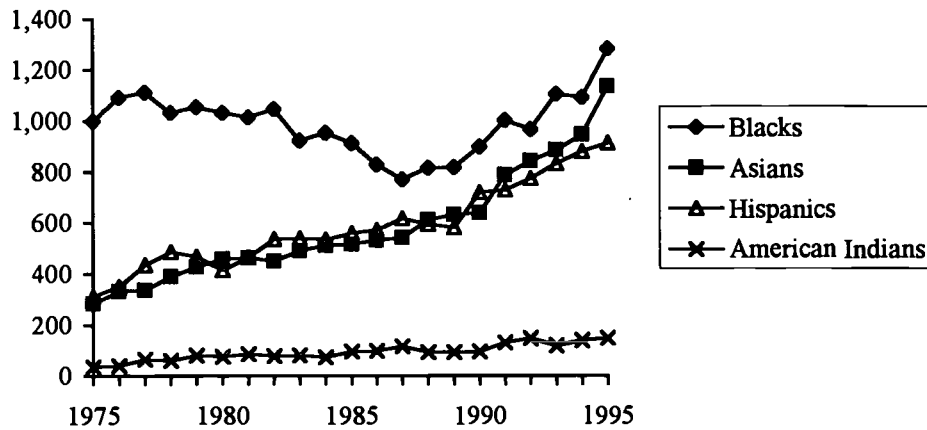

Among U.S. citizens, all four racial/ethnic minority groups also reached record numbers in 1995. Additional trends for these racial/ethnic minority groups were as follows for U.S. citizens:

- The number of blacks receiving doctorates increased by 17.5 percent since last year, from 1,095 in 1994 to 1,287 in 1995. As a result, blacks increased their proportion among U.S. citizens receiving doctorates from 4.1 percent in 1994 to 4.7 percent in 1995, topping the previous high of 4.4 percent in 1977.
- Of the 20 institutions awarding the most baccalaureates to blacks who later received Ph.D.s between 1991 and 1995, 15 are Historically Black Colleges and Universities (HBCUs). (See Table 4, page 24.) Two HBCUs are also among the 20 institutions awarding the most Ph.D.s to blacks in 1995. (See Table 5, page 25.)
- The number of Asians receiving doctorates increased by 19.9 percent over last year, from 949 in 1994 to 1,138 in 1995. Asians increased their percentage of all U.S. doctorate recipients from 3.5 percent in 1994 to 4.2 percent in 1995. They have more than tripled their proportion among U.S. doctorates since 1976.
- Hispanics, too, increased their numbers among U.S. citizens receiving doctorates, from 884 in 1994 to 916 in 1995. Their share of U.S. citizen doctorates remained largely unchanged since 1994, but it has almost tripled since 1976.
- The number of American Indians receiving doctorates increased from 142 in 1994 to 148 in 1995. Though the numbers are still small, the proportion of U.S. citizens earning doctorates who are American Indians has increased even more sharply than for other minority groups since 1976 when they earned only 40.

---

<sup>2</sup> “Asians” includes Asians and Pacific Islanders; “American Indians” includes Alaskan Natives.

### Field of Doctorate

Of the seven broad fields profiled in this report, life sciences has the largest number of Ph.D.s, though engineering has had the fastest recent growth. (See Table 2, page 22.)

- All broad science and engineering fields reached new highs in 1995. Following life sciences (7,913 in 1995) were physical sciences (6,806 Ph.D.s), social sciences (6,623 Ph.D.s), and engineering (6,007 Ph.D.s).
- Among the nonscience fields in 1995, education produced 6,546 Ph.D.s, compared to 5,061 in humanities and 2,654 in professional/other fields. The number of doctorates in humanities reached its highest level since 1973. Professional/other fields was the only broad nonscience field to break its previous record number of doctorates (2,583 in 1994).
- The annual number of engineering doctorates grew the fastest over the past decade, by 89.7 percent. During that period, physical sciences grew at 50.2 percent, humanities at 47.6 percent, professional/other fields at 40.2 percent, life sciences at 36.9 percent, and social sciences at 14.9 percent. Education declined by 2.8 percent since 1985.

FIGURE 5 Field of doctorate, 1965-1995.

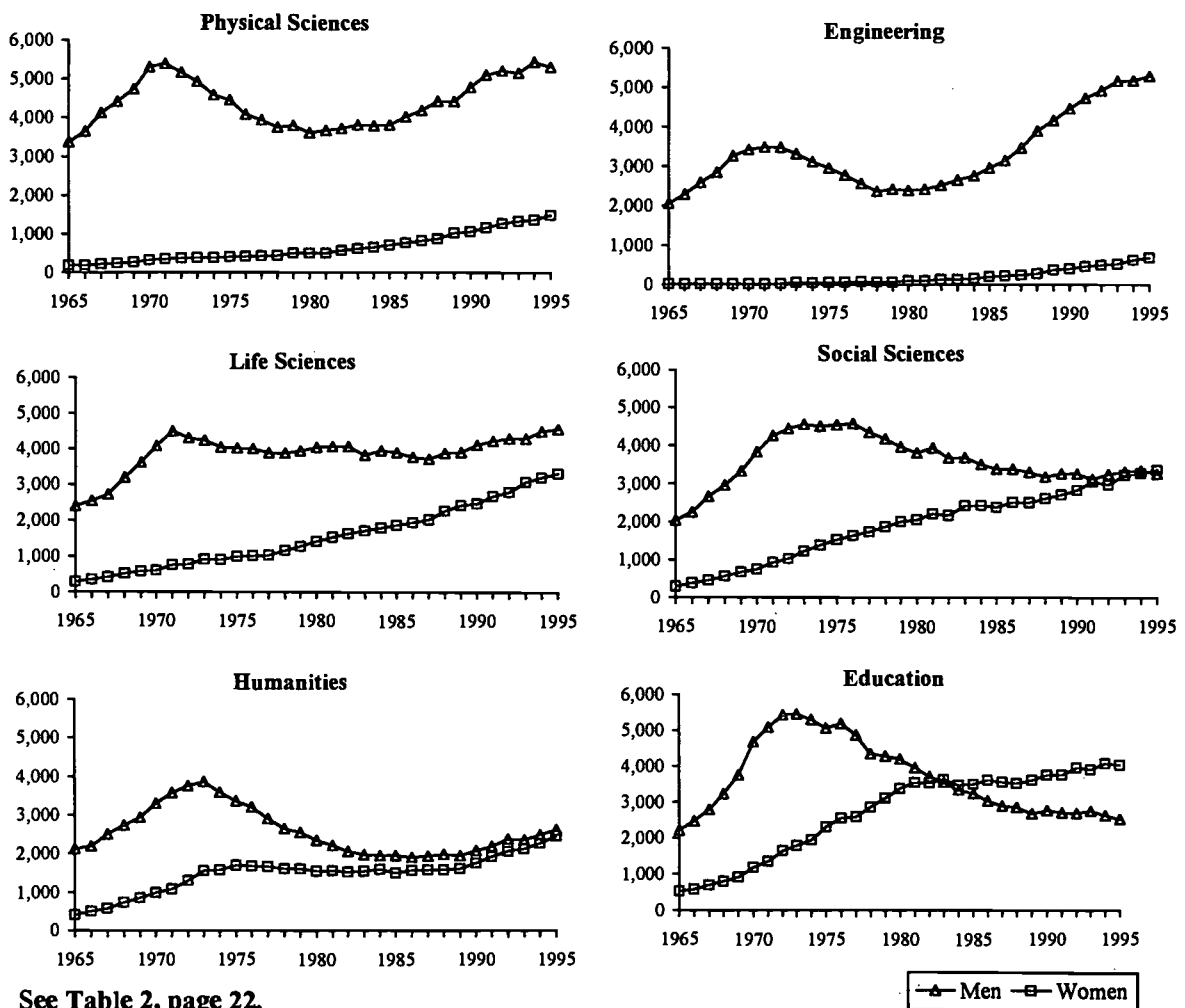

See Tables 2 (page 22), 6 (page 26), or 23 (page 73) and Appendix Table B-1, pages 129-131.

SOURCE: National Research Council, Survey of Earned Doctorates.

In 1995 the number of doctorates awarded to men surpassed those to women in five of seven broad fields. Women continued to earn the majority of doctorates in education, with 62 percent of all doctorates. For the first time, women also outnumbered men in social sciences (3,362 to 3,261). They were near parity in the humanities. Women remained substantially outnumbered in the fields of life sciences (42 percent of Ph.D.s), physical sciences (22 percent), and engineering (12 percent).

- Although the number of women Ph.D.s has increased in every broad field over the past 30 years, men have experienced major declines since the early 1970s in the social sciences, humanities, and education. The number of doctorates earned by men in the social sciences has stabilized in recent years, and their numbers in humanities have slowly risen. The decline of male doctorates in education has continued, though, decreasing again from 2,618 in 1994 to 2,514 in 1995. The number of education doctorates awarded to men in 1995 was about half the number in 1975.

FIGURE 6 Field of doctorate, by gender of doctorate recipients, 1965-1995.

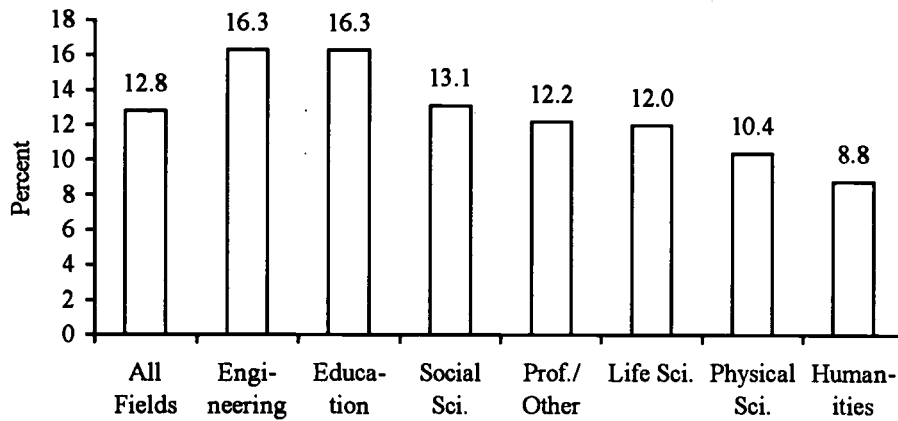

See Table 2, page 22.

SOURCE: National Research Council, Survey of Earned Doctorates.

Racial and ethnic minorities received almost 13 percent of all doctorates awarded to U.S. citizens in 1995. As a group they accounted for more than 16 percent of doctorates in education and in engineering each. They accounted for 9 to 13 percent of Ph.D.s in each of the remaining broad fields.

- In 1995 blacks, Hispanics, and American Indians earned their largest numbers of doctorates in the field of education, followed by the social sciences. Life sciences and engineering were the leading fields among Asians.
- Among blacks, 44 percent of all doctorates were in the field of education in 1995. Blacks received more than 10 percent of all Ph.D.s awarded to U.S. citizens in that field. The overall decline in the number of black Ph.D.s from the mid-1970s to the mid-1980s can be accounted for by the sharp drop in black Ph.D.s in education during that period. The subsequent increase over the past decade is partially accounted for by the rebound in black Ph.D.s in education but also by increases across all broad fields. The largest numerical increases in the past decade have been in education, life sciences, and social sciences. The largest percentage increases have been in engineering and life sciences.
- In 1995 almost two-thirds of doctorates earned by Asians were in the broad fields of life sciences, engineering, and physical sciences. Asians received 11 percent of Ph.D.s awarded to U.S. citizens in engineering, about 6 percent in physical sciences, and more than 5 percent in life sciences. Trends among Asians, though, have been driven by advances in almost every field. The numbers of Asians in social sciences and engineering have almost tripled in the past decade and more than doubled in each of the other fields except education.
- In 1995 almost half of the doctorates earned by Hispanics were in education or social sciences. Another 30 percent received their Ph.D.s in life sciences and humanities. The largest numerical increases among Hispanics in the past decade have been in social sciences and life sciences. The largest percentage increases, though, have been in engineering and physical sciences.
- American Indians also have had increases in every field except education. Their numbers in the past decade, though small, have increased 10-fold in engineering, tripled in physical sciences, more than doubled in humanities, doubled in professional fields, and increased by about half in life and social sciences.

FIGURE 7 Percentage of Ph.D.s awarded to U.S. minorities, by broad field, 1995.

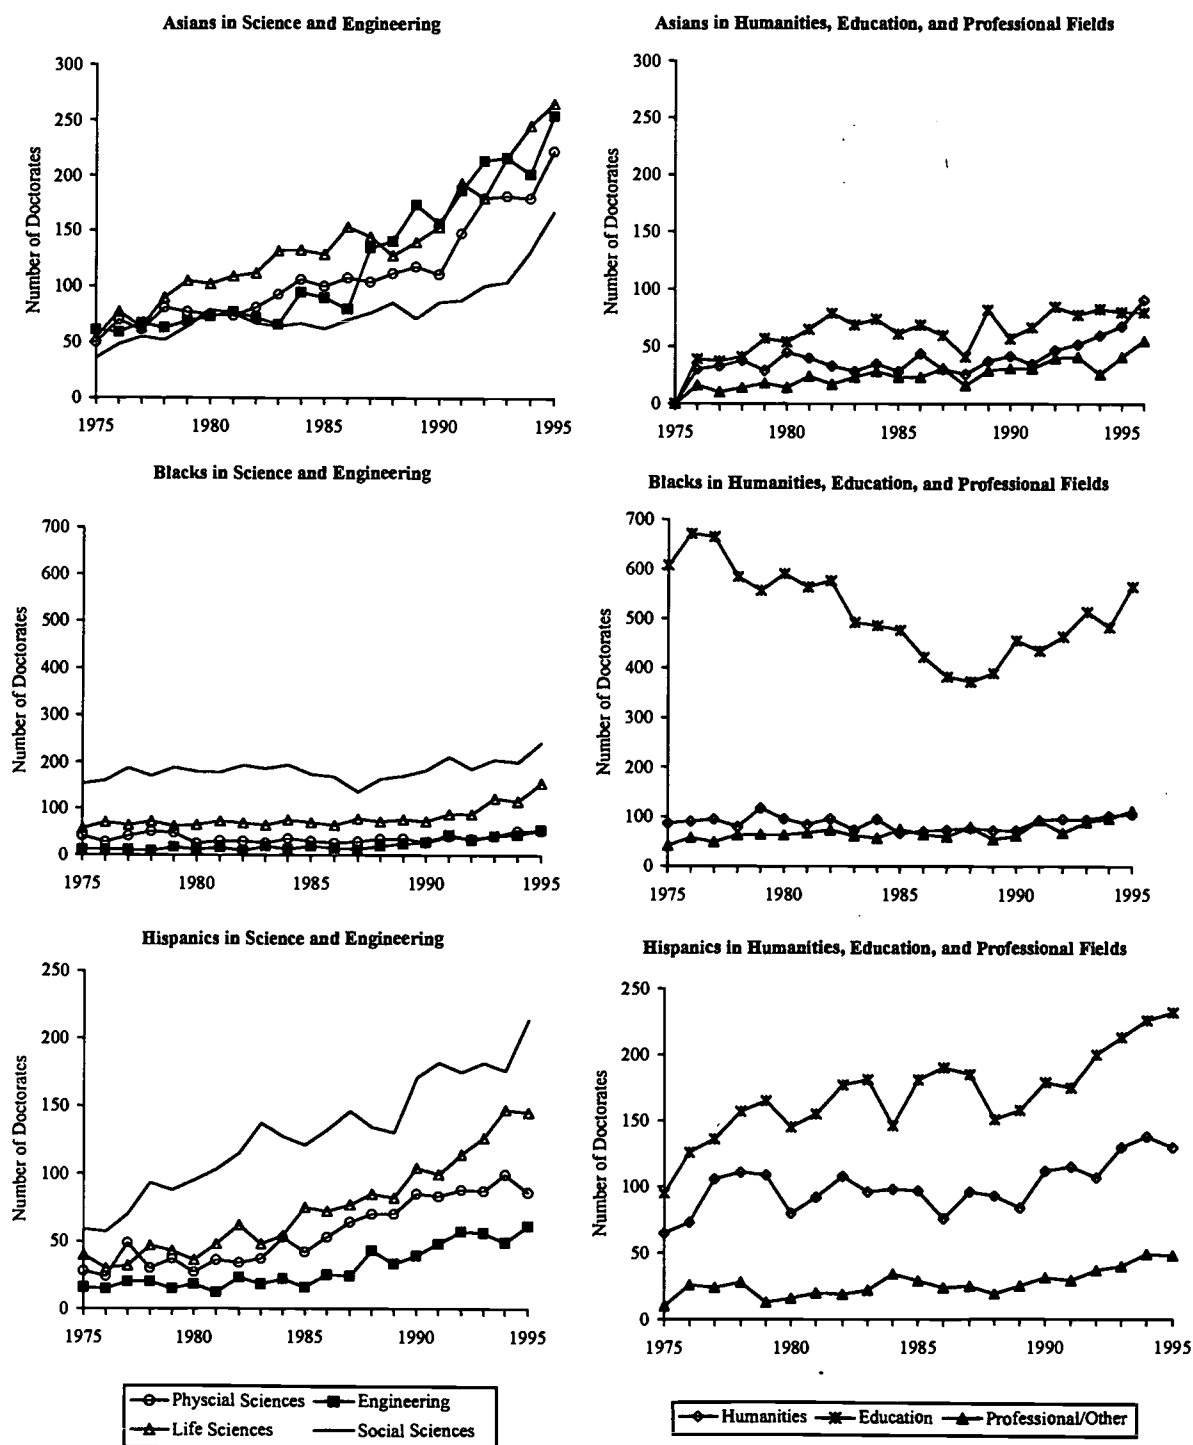

NOTE: Percentages are based on the total number of U.S. citizen Ph.D.s whose race/ethnicity is known. Minorities include Asian Americans, blacks, Hispanics, and American Indians.

### Time to Degree

Total time to degree (TTD) measures the total number of years between receipt of the baccalaureate and receipt of the Ph.D. Registered time to degree (RTD) gauges the amount of time a person was enrolled in educational programs between receipt of the baccalaureate and receipt of the Ph.D. RTD includes work on master's degrees, enrollment in nondegree programs, and time spent working on the doctorate, including the dissertation. RTD does not count time off during this period. Neither TTD nor RTD distinguishes between full- and part-time enrollment.

- Median TTD has increased steadily since 1991, from 10.5 to 10.9 years, nearly three years longer than the median for 1970 graduates (8.0 years). Median RTD has been stable at 7.2 years since 1992, after growing to that level from 5.6 years in 1970. (See Table 8, page 28.)
- Both TTD and RTD varied considerably by field. In 1995 doctorate recipients in education had the longest median TTD (19.9 years), while those in physical sciences had the shortest median TTD (8.4 years). The longest median RTD was in the humanities (8.4 years), and the shortest median RTD was in engineering (6.4 years).
- Time to degree was longer for women than for men, but the difference was often minimal within the same broad field. (See Table 9, page 29.) Blacks had the longest time to degree of all U.S. racial/ethnic groups, largely because their highest percentage of degrees was in the field of education. Both permanent residents and U.S. citizens exhibited longer time-to-degree rates than did temporary residents.

### Financial Support

As in the previous three years, university funding (mostly via teaching and research assistantships) was the primary source of graduate school support for the majority of 1995 Ph.D.s (53 percent). (See Table 10, page 30.) Another 36 percent of Ph.D.s were primarily supported by personal resources (their own earnings, family contributions, loans) and the remaining 11 percent by resources from federal or state governments, nonfederal competitive fellowships, businesses, and employers.

- The type of primary support varied greatly by field. University sources were most common in physical and life sciences and engineering (as reported by well over half of recipients). Personal resources were easily the most typical in education (as reported by 78 percent of recipients).
- Overall, a majority (58 percent) of male Ph.D. recipients cited university funding as their primary source of support. Of female Ph.D. recipients, roughly equal numbers relied on personal resources (46 percent) and university funding (44 percent).
- The differences between men and women largely disappear within fields, though several variations are noteworthy: a higher percentage of women than men in engineering cited federal funding as a primary source of financial support; higher percentages of men than women cited university support in life and social sciences.
- Among U.S. citizens, a majority of Asians cited university support as primary, while personal support was cited as primary among blacks, Hispanics, American Indians, and whites.
- Differences among demographic groups are partially accounted for by the distributions of these groups across broad fields. Within fields, differences of note include (1) high percentages of university support for Asians in physical sciences, engineering, and professional/other; (2) higher-than-average percentages of federal support for Asians in life sciences, for blacks in physical, life, and social sciences, and for Hispanics in sciences, engineering, and education; and (3) very high levels of "other" support for blacks, and to a lesser degree Hispanics, in the sciences, engineering, and humanities.

SOURCE: National Research Council, Survey of Earned Doctorates.

Almost half (47 percent) of all Ph.D.s in 1995 reported debt related to their combined undergraduate and graduate education. The majority of those with debt reported owing more than \$10,000.

- Doctorate recipients in engineering were the least likely to have incurred educational debt (38 percent), while those in social sciences were the most likely (60 percent).
- Almost two-thirds of social science Ph.D.s with debt owed more than \$10,000, and over one-fifth owed more than \$30,000. By contrast, more than half of the indebted Ph.D.s in physical sciences and about half of those in life sciences and engineering owed \$10,000 or less. (See Table 11, page 31.)
- Men and women reported debt in equal proportions and had similar distributions across levels of debt. Among U.S. citizens, Hispanics were the most likely of racial/ethnic groups to have educational debt and to report the highest level of debt. (See Table 12, page 31.)
- Non-U.S. citizens were much less likely to have incurred debt than U.S. citizens, the majority of whom were indebted. Temporary residents were more likely than permanent residents to report debt and to report a very high level of debt; this is surprising in that temporary residents rely less than permanent residents on personal sources of support, the category that includes loans.

FIGURE 12 Percentage of Ph.D.s with debt, total and by broad field, 1995.

See Table 11, page 31.

### Postgraduation Plans

The proportion of Ph.D.s reporting definite postgraduation commitments at the time the doctorate is earned declined from about two-thirds in the 1970s and 1980s to about three-fifths in 1995. (See "Definite commitments," page 142.) Of those Ph.D.s in 1995 who did report having definite postgraduation commitments, 70 percent planned to be employed while 30 percent planned postdoctoral study. (Postdoctoral appointments are considered to be study rather than employment in this report.) The proportion of new Ph.D.s with postdoctoral study plans has steadily increased since 1975, when only 17 percent planned further study. (See Table 13, page 32.)

- Doctorate recipients in professional/other and education fields were the most likely to have work plans (97 and 96 percent, respectively), followed closely by humanities Ph.D.s (92 percent). Study plans were by far the most common in life sciences (65 percent).
- The majority of Ph.D.s in every major demographic group planned to work rather than pursue further study after graduation. However, women were even more inclined toward employment than were men.
- Among the aggregate of U.S. citizens and permanent residents, blacks had the largest proportion with work plans (about 83 percent), and Asians had the largest proportion with study plans (49 percent, up from 35 percent in 1990). (See Table 14, page 33.) These patterns are explained mainly—and for blacks and women, entirely—by the fields in which these different groups tend to earn degrees.

FIGURE 13 Postgraduation commitments of doctorate recipients for selected years, 1975-1995.

NOTE: Only Ph.D.s with definite commitments are included. Percentages are based on the number of Ph.D.s whose specific plans are known.

See Tables 13 and 14, pages 32 and 33.

See technical notes in Appendix C for rates of nonresponse to the applicable survey questions and for further explanation of postgraduation plans.

SOURCE: National Research Council, Survey of Earned Doctorates.

### Employment Sector

In 1995, as in earlier years, academe was the primary employer of U.S. citizens and permanent residents who had definite commitments for employment in the United States after graduation.

- The proportion of Ph.D.s intending to work in academe has fluctuated over the last two decades. In 1975, 60 percent of U.S. citizens and permanent residents with employment commitments were headed for academia. By 1985, the proportion had declined to 49 percent; it rose again to 54 percent in 1995. The number of new doctorates with academic commitments rose from about 6,500 in 1985 to almost 7,500 in 1995. (See Table 15, page 34.)
- Plans for employment in industry (including self-employment) increased from 13 percent of Ph.D.s in 1975 to 20 percent of Ph.D.s in 1995. "Other" employment sectors (namely K-12 schools and nonprofit organizations) also showed an increase, from 14 percent in 1975 to 17 percent in 1995, though the percentage is down from 19 percent in 1994.
- The sector of planned employment for Ph.D.s varied by field. In 1995 academic employment plans were most predominant in the humanities (83 percent) and professional/other fields (73 percent). Industry was most frequently reported among engineers (62 percent) and physical scientists (44 percent). There was a small increase in academic employment among physical scientists in the last year, however, so that the academic and industrial sectors are almost equal now for that broad field.
- Academic employment plans were more prevalent among women (60 percent) than men (49 percent), while the proportion of men in industry (27 percent) was more than twice that of women.
- The proportion of doctorates with definite commitments in academia has been consistently higher for women than men. However, the actual number of men with academic commitments was greater than for women until 1992. In 1992 the number of women with definite commitments for academic employment was 3,636, while the number for men was 3,596. This trend has continued: In 1995, 3,866 women and 3,559 men had definite commitments for employment in academia.
- The majority of Ph.D.s among every racial/ethnic group but Asians reported plans to work in academe. Asians favored industry (51 percent) over academic employment (38 percent). (See Table 16, page 35.) The sectors chosen by the various demographic groups are partially explained by their fields of specialization.

**FIGURE 14** Employment sector of doctorate recipients with postgraduation commitments in the United States for selected years, 1975-1995 (U.S. citizens and permanent residents).

**NOTE:** Only Ph.D.s with definite commitments for employment are included. Foreign locations are excluded. Percentages are based on the number of Ph.D.s whose employment sector is known. Government includes federal, state, and local government agencies in the United States.

NOTE: Numbers represent those Ph.D.s with known primary support; percentages are based on these numbers. Because nonresponse to "primary" source of support is much greater than for other variables and fluctuates from year to year, the reader is advised *not* to compare percentages in this table with those published in earlier reports. The overall nonresponse rate for "primary" source of support was 25.2 percent in 1995, compared to 27.6 percent in 1994, 33.8 percent in 1993, and 30.3 percent in 1992. See technical notes in Appendix C for further information.

"Personal" includes loans as well as own earnings and contributions from spouse/family. Federally funded research assistantships (RAs) are grouped under "University" because not all recipients of such support are aware of the actual source of funding. For further definition of "Federal" support, see item 17 on the survey questionnaire in Appendix D. "Other" support includes U.S. nationally competitive fellowships, business/employer funds, foreign government, and state government.

\*\*Asians" includes Pacific Islanders. "American Indians" includes Alaskan Natives.

†Includes mathematics and computer sciences.

## THE CONTRIBUTION OF CHINA, INDIA, TAIWAN, AND KOREA TO THE GROWTH OF NON-U.S. PH.D.S, 1985-1995

### Introduction

Following a decade of retrenchment, the number of doctorates granted by U.S. universities increased from 31,297 in 1985 to 41,610 in 1995. The increase in the number of degrees awarded to non-U.S. citizens (with temporary or permanent visas) accounted for 64 percent of the annual increases for all Ph.D.s from 1985 to 1995. This growth among non-U.S. Ph.D.s has raised questions about the role of non-U.S. citizens in U.S. higher education, the meaning of this “internationalization” of higher education for the national and global economies, and proper federal policy on the financial support of non-U.S. citizens in U.S. graduate programs.

FIGURE 15 Doctorate recipients, total and by citizenship status, 1961-1995.

See Table 17, page 67.

SOURCE: National Research Council, Survey of Earned Doctorates.

This section presents data on non-U.S. citizens and citizens of four countries—China, India, Taiwan, and Korea—that played a central role in the growth of the number of non-U.S. citizens earning doctorates over the last decade. Key findings include:

- The expansion in the number and percentage of Ph.D.s awarded by U.S. universities to non-U.S. citizens from 1985 to 1995 was driven by the number of degrees awarded to citizens of the four leading countries of citizenship among non-U.S. Ph.D.s—China, India, Taiwan, and Korea. In 1985 these four countries accounted for 29 percent of all non-U.S. Ph.D.s, but in 1995 they accounted for 55 percent.

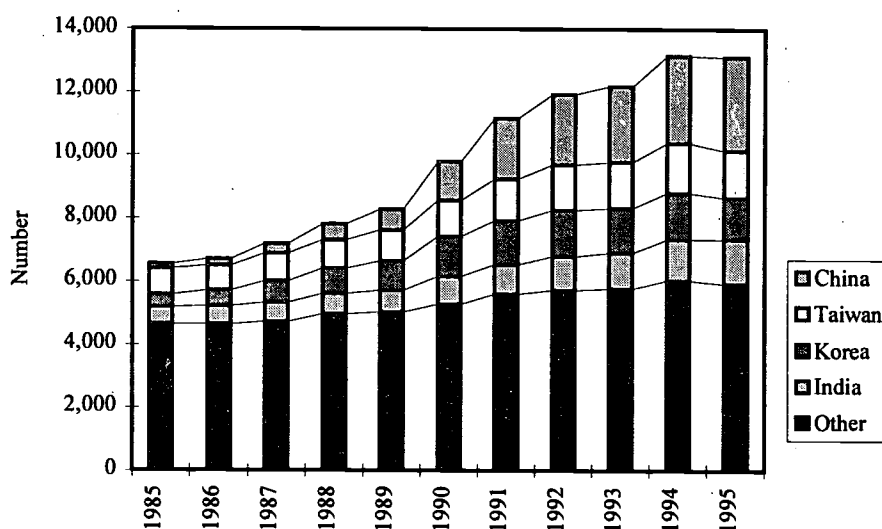

- The largest one-country increase during the decade was among Chinese citizens. Chinese citizens earning Ph.D.s in the U.S. jumped from 137 in 1985 to 2,976 in 1995.
- While U.S. citizens were distributed across broad fields, more than 70 percent of non-U.S. citizens specialized in engineering, physical sciences, or life sciences. Non-U.S. citizens have increasingly comprised large percentages of these fields—almost 60 percent for engineering. Ph.D.s from the four leading non-U.S. countries reinforced the pattern for non-U.S. Ph.D.s, particularly with 42 percent of Taiwanese and 40 percent of Indians in engineering, and 34 percent of Chinese in physical sciences.
- In 1995 U.S. and non-U.S. citizens differed in their sources of financial support for graduate school. Almost 90 percent of non-U.S. citizens reported university support while about 75 percent of U.S. citizens did. By contrast, only about half of non-U.S. Ph.D.s reported personal support while almost 85 percent of U.S. citizens did.
- There were differences among citizens of the leading non-U.S. countries in their sources of support. Nearly all Chinese and Indians reported university support, though the mix of support that Chinese Ph.D.s relied on has changed in the past decade, as government support decreased and personal support increased. Percentages of Taiwanese and Koreans reporting university support were similar to those of non-U.S. Ph.D.s generally. However, 75 percent of Taiwanese and 80 percent of Koreans reported personal support compared to 50 percent of non-U.S. citizens, 26 percent of Chinese, and 31 percent of Indians.
- The percentage of non-U.S. Ph.D.s staying in the U.S. after graduation increased from 54 percent in 1985 to 65 percent in 1995. While the percentage of those with definite commitments for work or study who stay in the U.S. increased from 55 to 65 percent in the past decade, the percentage staying in the U.S. of those still seeking work or study at the time of their degrees increased from 51 percent in 1985 to 66 percent in 1995.
- Behind these general figures for postgraduation location, citizens of the four leading countries have followed different paths. Chinese and Indian Ph.D.s tend to stay in the U.S. after earning their degrees regardless of their visa status, particularly and increasingly so for Chinese. Taiwanese and, especially, Korean Ph.D.s tend to locate abroad and, in 1995, a majority returned home after graduation.
- Doctorate recipients from China represent a special case. Following the Tiananmen Square massacre in 1989, Chinese students sought to stay in the U.S. regardless of visa status and, when possible, sought to obtain a permanent visa allowing them to remain here. This was facilitated by the Chinese Student Protection Act of 1992, which made thousands of Chinese in the U.S. eligible to apply for permanent residency. As a result, the percentage of Chinese Ph.D.s who are permanent U.S. residents increased from 5 percent in 1990 to 80 percent in 1995. (Only 20 percent of other non-U.S. Ph.D.s hold permanent visas.) These changes have had profound effects on the postgraduation location, postgraduation plans, and employment sector of new Chinese Ph.D.s.

- While the number of doctorate recipients with definite commitments for employment increased over the past decade, this growth has been slower than for the overall number of new Ph.D.s. Thus, the percentage of new Ph.D.s with definite commitments for work or study declined during this period.
- In the past decade the most striking feature of the postgraduation status of new Ph.D.s has been the increase in the number and percentage still seeking employment or postdoctoral study at the time their degrees are earned. While this is true of U.S. Ph.D.s as well, it has been even more significant for non-U.S. Ph.D.s, who have been overrepresented among those still seeking work or further study at graduation. Less pronounced, but still notable, has been the increasing number and percentage of new Ph.D.s who have postdoctoral study appointments.
- For citizens of the four leading non-U.S. countries, the percentage seeking work or further study has increased substantially, largely at the expense of the percentage of those with definite employment commitments. The percentage of doctorate recipients with postdoctoral study plans has been relatively stable for citizens of these four countries.
- Overall, the percentage of new Ph.D.s with definite commitments who go directly from doctoral studies to work in academia has varied over the past two decades. The percentage declined from 60 percent in 1975 to 49 percent in 1985 and then rose to 54 percent in 1995. However, the postgraduation plans of U.S. and non-U.S. citizens have differed. An increasing percentage of U.S. Ph.D.s with definite commitments go to work in academia. Driven by a dramatic shift in employment sector among Chinese Ph.D.s, non-U.S. Ph.D.s have shifted over time away from academia toward industry.
- While a shift toward industry has also been made by Indians, the movement of Chinese Ph.D.s has been dramatic. In 1985, 76 percent of Chinese Ph.D.s with employment commitments had them in academia and 14 percent had them in industry. In 1995, 33 percent had commitments in academia and 60 percent in industry (overwhelmingly in the U.S.). This has surely resulted from the change in visa status and, consequently, postgraduation location for most Chinese. There has been a simultaneous shift in postgraduation location to the U.S. by the increasing number of Chinese still seeking work or study at the time they earned their degrees.
- Not all non-U.S. citizens seek to stay in the U.S. Most Taiwanese and Koreans return home after graduation, whether they have definite commitments or are still seeking. For Taiwanese the percentage with definite commitments in the U.S. has declined over time, while the percentage with academic or postdoctoral study positions abroad have increased. Koreans with definite commitments have shifted away from academic commitments abroad toward postdoctoral study in the U.S. or abroad and toward industry abroad.

- Finally, the number of Ph.D.s that U.S. universities awarded to non-U.S. citizens was lower by 41 in 1995 than in 1994. This may presage a new downward trend among non-U.S. citizens. Other evidence of this downward trend includes a decline in non-U.S. citizens enrolled in U.S. graduate schools from 1992 to 1993 and 1993 to 1994.<sup>1</sup>

The next three sections review trends in the numbers of doctorates, broad fields of doctorates, and financial support for graduate education. The sections that follow these explore characteristics of the labor market for new Ph.D.s by examining postgraduation location by visa status, postgraduation commitments for employment or study, postgraduation employment sectors, postgraduation employment and study by location, and the postgraduation location of doctorates still seeking work or further study at graduation. Finally, data presented here is reviewed by country.

FIGURE 16 Non-U.S. citizens earning doctorates from U.S. colleges and universities, by country of citizenship, 1985-1995.

See Table 19, page 69.

SOURCE: National Research Council, Survey of Earned Doctorates.

### Number of Doctorates

The number of Ph.D.s awarded annually by U.S. colleges and universities has increased by one-third from 31,297 in 1985 to 41,610 in 1995. Significant growth in the number of non-U.S. Ph.D.s—particularly Ph.D.s from China, India, Taiwan, and Korea—propelled this growth. From 1994 to 1995, though, the overall number of non-U.S. Ph.D.s declined by 41, suggesting a new trend. (See Tables 17, 18, and 19, pages 67, 68, and 69.)

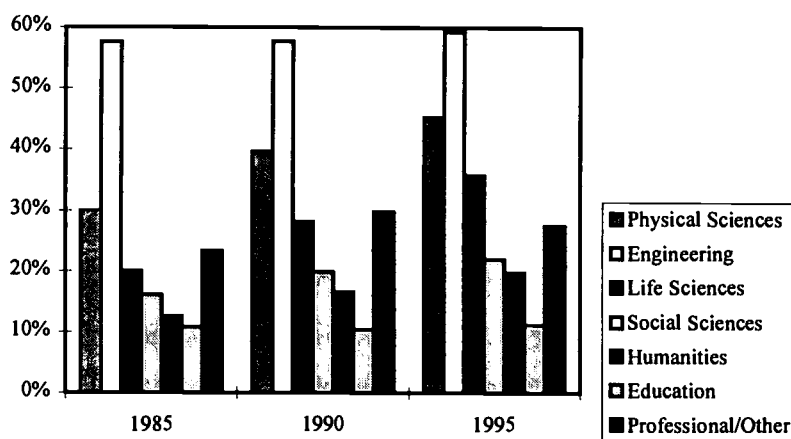

- From 1985 to 1995, the annual number of U.S. citizens earning Ph.D.s grew by almost one-fifth, but the number of non-U.S. citizens earning Ph.D.s doubled from 6,551 in 1985 to 13,113 in 1995. As a result, the percentage of all Ph.D.s that U.S. universities awarded to non-U.S. citizens increased from 22 percent in 1985 to 32 percent in 1995.
- As shown in Figure 16, rapid increases in the number of doctorates awarded to citizens of the four leading countries for non-U.S. citizens in 1995—China, India, Taiwan, and Korea—have fueled this overall increase. The number of Ph.D.s awarded to citizens of these countries grew almost fourfold from 1,904 in 1985 to 7,188 in 1995.
- The number of new doctorates from China has been a driving force. China has emerged as the leading country among non-U.S. Ph.D.s and the growth among Chinese Ph.D.s accounted for 43 percent of the growth among non-U.S. Ph.D.s during the last decade. The number of Chinese Ph.D.s grew from 137, or 2 percent of all non-U.S. Ph.D.s, in 1985 to 2,976, or 23 percent of all non-U.S. Ph.D.s, in 1995. The number of Indian, Taiwanese, and Korean Ph.D.s together grew from 27 percent of non-U.S. Ph.D.s in 1985 to 32 percent in 1995.
- Data for 1995 indicate a potential new trend. While the number of non-U.S. Ph.D.s from China and India increased, the number from Taiwan and Korea dropped by 92 and 170, respectively, from 1994. These declines contributed to an overall decline among non-U.S. Ph.D.s of 41 in 1995. This first decline for non-U.S. Ph.D.s since the mid-1970s may presage a new downward trend among non-U.S. Ph.D.s as graduate enrollments for non-U.S. citizens have also declined for the last three years.

### Field of Doctorate

While U.S. citizens were distributed across broad fields of study, more than 70 percent of non-U.S. citizens received their doctorates in engineering, physical sciences, or life sciences. As a result, non-U.S. citizens have increasingly comprised large percentages of these fields—a majority in the case of engineering. The doctorate contribution of the four leading foreign countries reinforced the pattern for non-U.S. Ph.D.s. (See Tables 20, 21, 22, and 23, pages 70, 71, 72, and 73.)

- Non-U.S. citizens are disproportionately concentrated in engineering. While 9 percent of U.S. Ph.D.s received their degrees in engineering in 1995, 27 percent of non-U.S. citizens did. U.S. universities granted almost 60 percent of all engineering doctorates to non-U.S. citizens in 1995. Ph.D.s from Taiwan and India have disproportionate concentrations in engineering at 42 and 40 percent, respectively, that intensified the non-U.S. distribution in that broad field. The percentages of Ph.D.s from China and Korea earning degrees in engineering are close to the non-U.S. average at 26 percent each.
- While 13 percent of U.S. Ph.D.s earned degrees in physical sciences, non-U.S. Ph.D.s have a higher concentration in that broad field as well, at 23 percent. Thirty-four percent of Ph.D.s from China earned degrees in physical sciences, reinforcing non-U.S. representation in that broad field. Chinese Ph.D.s received 15 percent of all doctorates in physical sciences in 1995.
- With 29 percent of all Chinese Ph.D.s in life sciences, Chinese also account for 11 percent of all Ph.D.s in that broad field. This concentration brought the percentage of non-U.S. Ph.D.s in that broad field slightly above the percentage non-U.S. of Ph.D.s generally.
- Koreans were more distributed across broad fields. While they approximated the average for all non-U.S. Ph.D.s in engineering and physical sciences, they had less than the average for non-U.S. Ph.D.s in life sciences (14 percent versus 21 percent) and more representation in the social sciences (16 percent versus 11 percent) and professional/other fields (11 percent versus 5 percent).

### Financing Graduate Education

In 1995 U.S. and non-U.S. Ph.D.s differed in their means of financial support for graduate school. Moreover, there were notable differences among citizens from the four leading non-U.S. countries in the financial support that they relied on. Chinese and Indian Ph.D.s relied largely on university support, while Taiwanese and Koreans also had personal resources.\* Notably, however, the mix of support for Chinese Ph.D.s has changed in the last decade, with a decrease in the percentage relying on government support and an increase in the percentage relying on personal resources. (See Table 24, page 74.)

- In 1995 almost 85 percent of U.S. citizens reported personal and family support compared to about half of non-U.S. citizens. By contrast, while about three-quarters of U.S. Ph.D.s received financial support from their universities, almost 90 percent of non-U.S. Ph.D.s reported such assistance.
- About 15 percent of U.S. Ph.D.s reported support from the U.S. government, a stable figure over the last 10 years. The percentage of non-U.S. Ph.D.s with support from a foreign government peaked at 19 percent in 1988 and declined to 11 percent in 1995.

FIGURE 19 Sources of support reported by doctorate recipients, by citizenship status, 1987-1995.

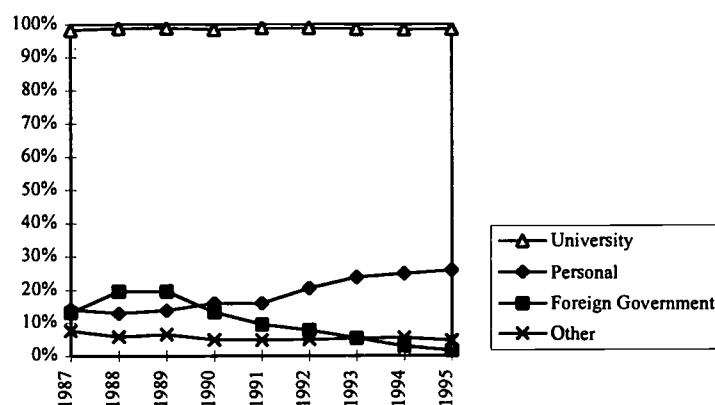

NOTE: Research assistantships funded by the federal government are counted as university support. See Table 24, page 74.

SOURCE: National Research Council, Survey of Earned Doctorates.

\* The Survey of Earned Doctorates asks doctorate recipients to list all sources of financial support during graduate school. The percentages noted below are those of all doctorates who reported a source. Doctoral students typically have more than one source of financial support, so categories of support add to more than 100 percent.

- Doctorates from China and India had higher-than-average percentages with university support, at 99 and 98 percent, respectively, in 1995, and lower-than-average percentages with personal support, at 26 and 31 percent, respectively. Very low percentages of Chinese and Indians reported foreign government support in 1995.
- While only 1 percent of Indian Ph.D.s have reported foreign government support since data were first collected in 1987, the percentage of Chinese students reporting foreign government support has varied. The percentage of Chinese students reporting foreign government support declined from a high of almost 20 percent in 1988 and 1989 to only one percent in 1995. Meanwhile, the percentage of Chinese students reporting personal support increased from 16 percent in 1990 to 26 percent in 1995.

FIGURE 20 Sources of support reported by doctorate recipients who are citizens of China, 1987-1995.

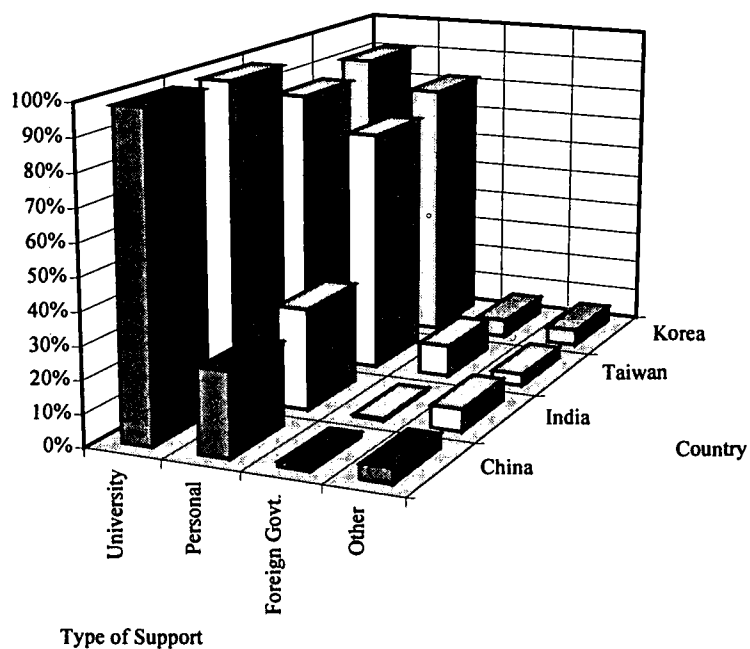

NOTE: Research assistantships funded by the federal government are counted as university support. See Table 24, page 74.

SOURCE: National Research Council, Survey of Earned Doctorates.

- While the percentages of Taiwanese and Korean Ph.D.s reporting university and government support in the last 10 years are similar to those of non-U.S. Ph.D.s generally, about 75 percent of Taiwanese and 80 percent of Koreans reported personal support in 1995. This compared to 50 percent of non-U.S. Ph.D.s and 26 and 31 percent, respectively, of Chinese and Indians. The 10 percent of Taiwanese and 6 percent of Koreans reporting government support represent higher figures than reported by Chinese and Indian Ph.D.s.

FIGURE 21 Sources of support reported by doctorate recipients who are citizens of the current four leading non-U.S. countries of citizenship, 1995.

NOTE: Research assistantships funded by the federal government are counted as university support. See Table 24, page 74.

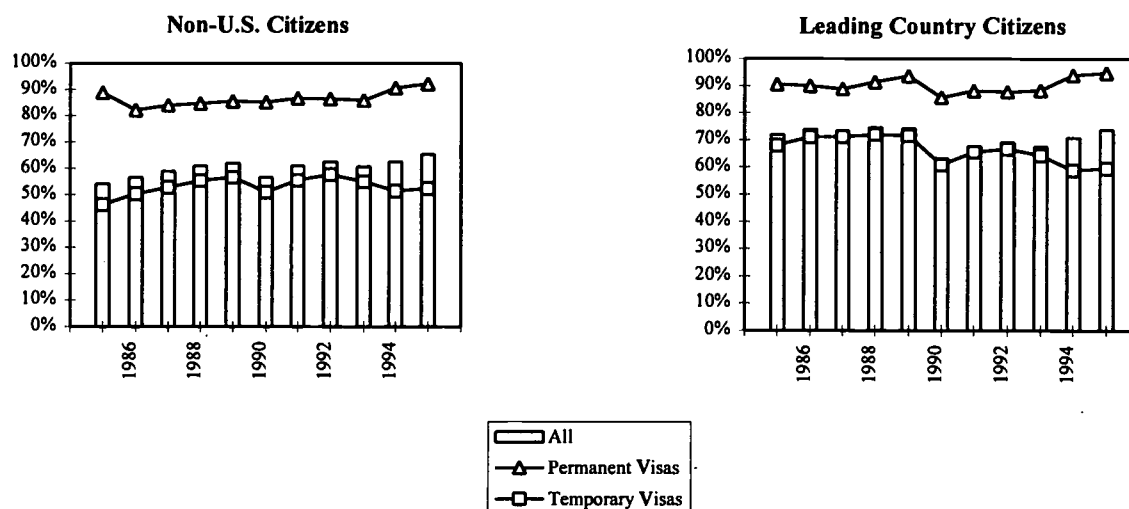

SOURCE: National Research Council, Survey of Earned Doctorates.

### Postgraduation Location

The overall percentage of non-U.S. Ph.D.s staying in the U.S. after graduation has increased from 54 percent in 1985 to 65 percent in 1995. As seen in separate sections below, the percentage of non-U.S. Ph.D.s with definite commitments for employment or postdoctoral study who stay in the U.S. increased in the last decade, from 55 percent in 1985 to 65 percent in 1995, while the percentage of non-U.S. Ph.D.s still seeking work or study at time of degree who indicated a U.S. location increased significantly, from 51 percent in 1985 to 66 percent in 1995. (See Tables 25 and 26, pages 76 and 77.)

- As with non-U.S. citizens overall, the percentage who stay in the U.S. increased for each visa category over the last 10 years, rising from 46 to 52 percent for temporary visa holders and from 89 to 92 percent for permanent visa holders. The percentage for citizens of the four leading non-U.S. countries considered together have been consistently higher.

FIGURE 22 Percentage of doctorate recipients indicating postgraduation location in the United States, for non-U.S. citizens and citizens of leading non-U.S. countries of citizenship, by visa status, 1985-1995.

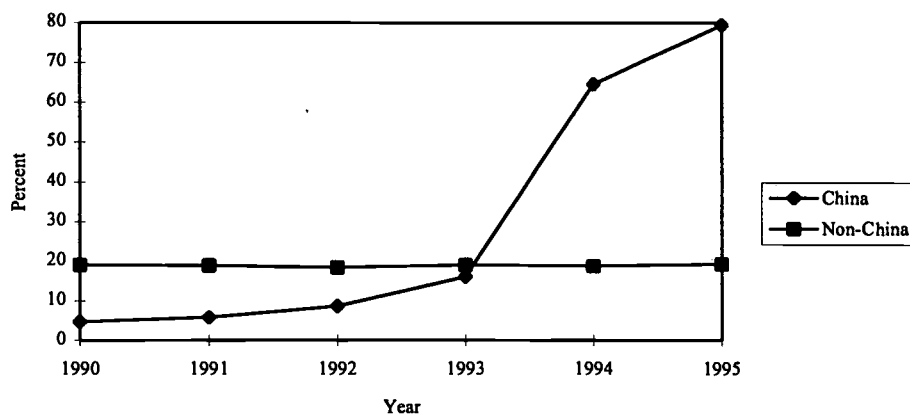

See Table 25, page 76.

SOURCE: National Research Council, Survey of Earned Doctorates.

Behind these general figures, however, there are differences among and changes for citizens of the four leading non-U.S. countries. In general, Indians and Chinese have tended to stay in the U.S. after earning their degrees regardless of their visa status, particularly and increasingly for Chinese Ph.D.s. Korean and Taiwanese Ph.D.s, however, increasingly locate abroad, presumably at home; in 1995 a majority of Ph.D.s from Korea and Taiwan did.

- High percentages of Chinese Ph.D.s have stayed in the U.S. because of the economic opportunities here and problems associated with reintegration into the Chinese labor force of Chinese Ph.D.s who have studied abroad. This tendency to stay in the U.S. was strengthened by the 1989 Tiananmen Square massacre, following which the percentage of Chinese with temporary visas seeking to stay in the U.S. increased from 86 percent in 1990 to 94 percent by 1992.
- At the same time, Chinese students began obtaining permanent visa status, when possible. This was facilitated by the Chinese Student Protection Act of 1992, which made thousands of Chinese in the U.S. eligible to apply for permanent residency in the U.S. on July 1, 1993. As a result, the percentage of Chinese Ph.D.s who are permanent residents increased from 5 percent in 1990 to 80 percent in 1995. By contrast, only about 20 percent of other non-U.S. Ph.D.s hold permanent visas. Chinese Ph.D.s with permanent visas have almost universally located in the U.S. after graduation since 1986.

FIGURE 23 Percentage of Ph.D.s who are permanent residents, for citizens of China and for non-U.S. citizens exclusive of China, 1990-1995.

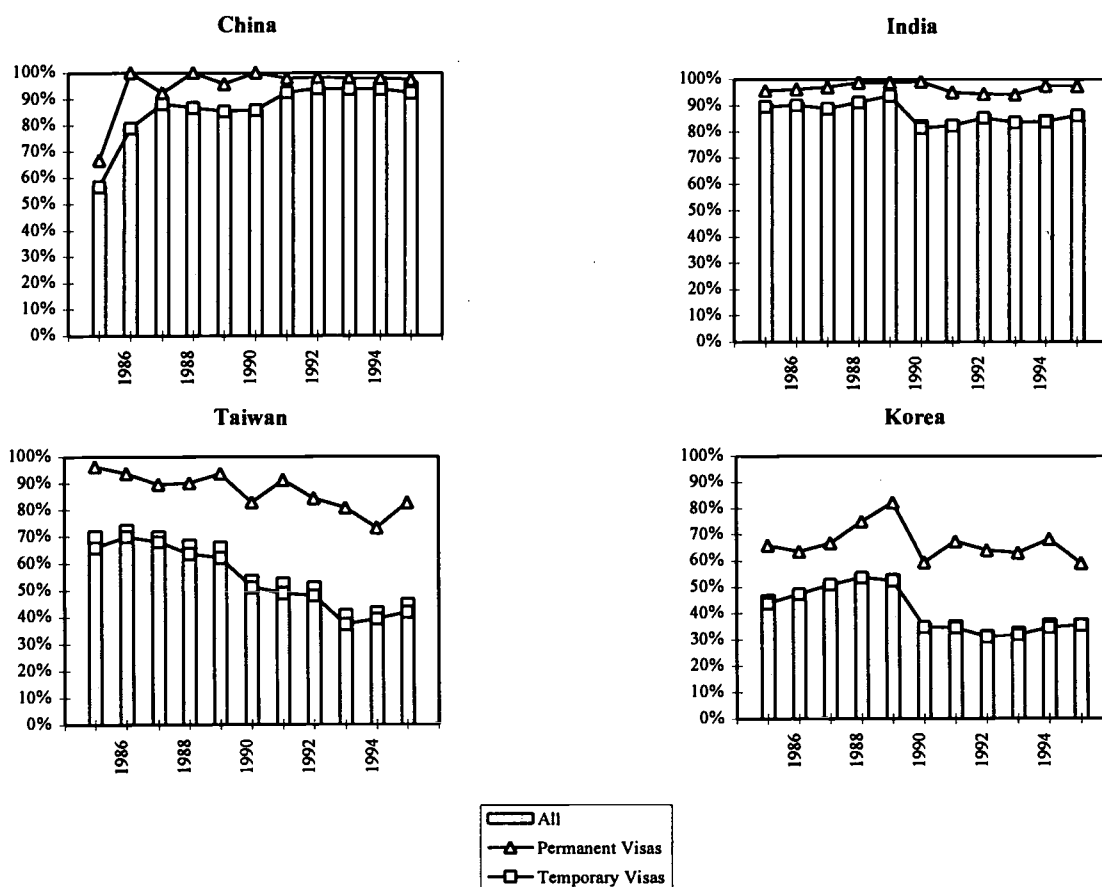

See Table 26, page 77.

SOURCE: National Research Council, Survey of Earned Doctorates.

- Indians have stayed in the U.S. for some period of time following graduation at percentages that are above the non-U.S. average. Overall, the percentage of Indians remaining in the U.S. after graduation has been at or near 90 percent over the past decade. In 1995, 97 percent of Indian Ph.D.s with permanent visas and 86 percent of temporary visa holders indicated an intention to stay here following graduation.

- The percentage of Taiwanese staying in the U.S. declined over the past decade from 72 percent in 1985 to 47 percent in 1995. The percentage locating in the U.S. has also decreased for Taiwanese in each visa category: the percentage with permanent visas staying in the U.S. decreased from 96 percent in 1985 to 83 percent in 1995; the percentage with temporary visas staying in the U.S. decreased from 66 to 42 percent from 1985 to 1995.
- Koreans have been even more apt to locate abroad. The percentage of Koreans staying in the U.S. declined over the past decade from 47 percent in 1985 to 38 percent in 1995. The percentage locating in the U.S. has also decreased for Koreans in each visa category: the percentage with permanent visas staying in the U.S. decreased from 66 percent in 1985 to 59 percent in 1995; the percentage with temporary visas staying in the U.S. decreased from 44 to 36 percent from 1985 to 1995.

### Postgraduation Commitments

In the past decade the most striking characteristic of the postgraduation status of new Ph.D.s has been the increase in the number and percentage of doctorates still seeking employment or postdoctoral study at the time their degrees are earned. While this is true of U.S. Ph.D.s as well, it has been even more pronounced for non-U.S. Ph.D.s, who have been disproportionately represented among those still seeking work or further study at graduation. Less striking but still notable has been the increasing number and percentage of new Ph.D.s who have postdoctoral study appointments. The number of Ph.D.s with employment commitments has been stable for U.S. Ph.D.s and has been increasing for non-U.S. Ph.D.s since 1985, but more slowly than the overall numbers of U.S. and non-U.S. Ph.D.s. (See Table 27, page 78)

- Among U.S. citizens the number of Ph.D.s with employment commitments at graduation remained relatively stable over the past decade at more than 13,000. The number of Ph.D.s with postdoctoral appointments at graduation increased by about one-fifth from more than 3,500 to more than 4,600. Still, as the number of U.S. Ph.D.s grew, the number still seeking employment or postdoctoral study at the time of degree award grew faster. As a result, the percentage of U.S. Ph.D.s seeking work or study increased from 25 percent in 1985 to 30 percent in 1995.
- As the number of non-U.S. Ph.D.s doubled, the number of non-U.S. Ph.D.s with employment commitments at graduation increased by about 30 percent, but the number with postdoctoral appointments and the number seeking work or study each grew by more than 250 percent. The percent of all non-U.S. Ph.D.s seeking work or study at the time of graduation increased from 32 percent in 1985 to 43 percent in 1995. Thus, a disproportionate share of those still seeking work or study at graduation are non-U.S. Ph.D.s.
- The percentage of doctorates seeking work or study at graduation increased for each of the four leading non-U.S. countries, too. The percentage for China increased from 29 percent in 1985 to 46 percent in 1995, for Taiwan from 36 to 52 percent, and for Korea from 37 to 59 percent. The percentage of Indians seeking work or study, however, only increased from 28 to 35 percent and their percentage remained below that for non-U.S. Ph.D.s generally.

### Postgraduation Employment Sector

Overall, the percentage of doctorate recipients with definite commitments for employment who go directly from doctoral studies to work in academia varied over the past two decades: 60 percent in 1975, 49 percent in 1985, and 54 percent in 1995. However, the postgraduation plans of U.S. and non-U.S. citizens differed. An increasing percentage of U.S. Ph.D.s with definite commitments go to work in academia. Driven by a dramatic shift in employment sector among Chinese Ph.D.s., non-U.S. Ph.D.s are increasingly working in industry. (See Table 28, page 82.)

- Over the last decade, the percentage of U.S. Ph.D.s with employment commitments who went to work in academia increased from about 50 to 55 percent. Meanwhile, the percentage of non-U.S. Ph.D.s who went to work in academia decreased sharply, from a high of 64 percent in 1987 to 53 percent in 1995, while the percentage who went to work in industry increased from 20 percent in 1985 to 32 percent in 1995.

FIGURE 27 Percentage of U.S. and non-U.S. citizen doctorate recipients with employment commitments, for academia and industry, 1985-1995.

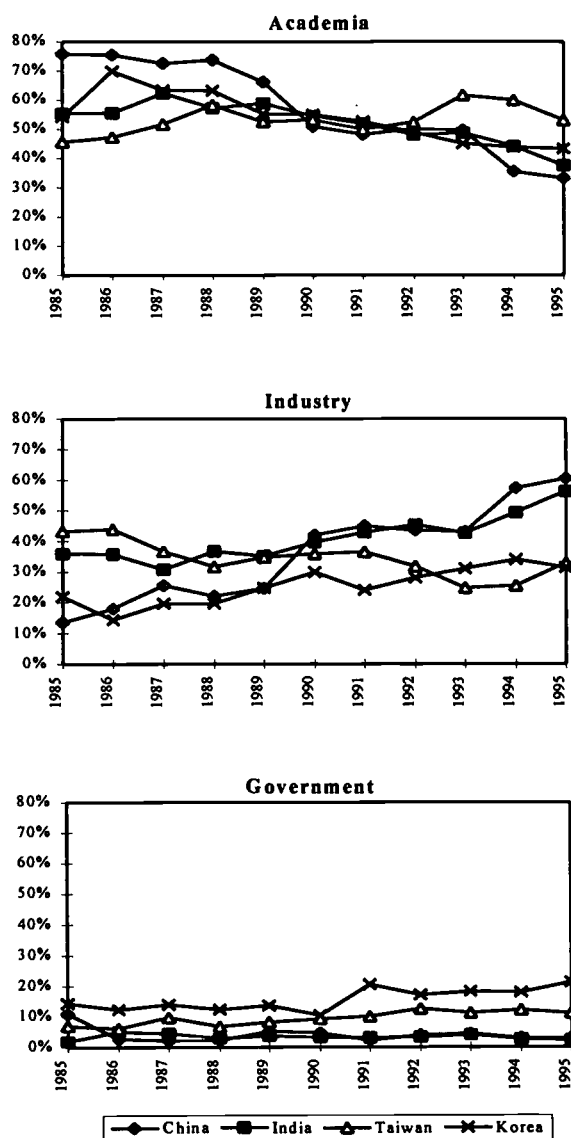

See Table 28, page 82.

SOURCE: National Research Council, Survey of Earned Doctorates.

- Over the past decade, non-U.S. Ph.D.s with employment commitments generally shifted employment sectors away from academia toward industry. Ph.D.s from China reinforced the trend: 76 percent of Chinese with employment commitments went to work in academia in 1985 as compared to 33 percent in 1995, while the percentage of those with commitments in industry increased from 14 to 60 percent during the same period. This is due to the large shift from temporary to permanent visa status for Chinese Ph.D.s since 1989. The trends were similar, though less pronounced, for Indians.

- Koreans also shifted away from academe toward industry but showed an additional growth in the percentage with commitments in government. Taiwanese moved in the opposite direction. The percentage with commitments in academe increased from 46 to 53 percent from 1985 to 1995, while the percentage in industry declined from 43 to 33 percent. As with Koreans, the number of Taiwanese with commitments for work in government increased over the decade, from 7 percent in 1985 to 11 percent in 1995.

### Postgraduation Employment and Postdoctoral Study by Location

The percentage of non-U.S. citizens with definite commitments for employment or postdoctoral study who stay in the U.S. after graduation increased from 55 percent in 1985 to 65 percent in 1995. However, there were, again, differing patterns for citizens of the four leading non-U.S. countries. Chinese and Indian Ph.D.s with definite commitments for employment or postdoctoral study planned to remain in the U.S. Koreans generally split their commitments between the U.S. and positions abroad over the past decade. Taiwanese with commitments have increasingly secured them abroad. A small, but potentially significant, trend is the growth of non-U.S. postdoctoral study positions among Korean and Taiwanese Ph.D.s. (See Tables 29, 30, and 31, pages 85, 91, and 92.)

FIGURE 29 Non-U.S. citizen doctorate recipients with definite commitments for postgraduation employment or postdoctoral study, by location in U.S. or abroad, 1985-1995.

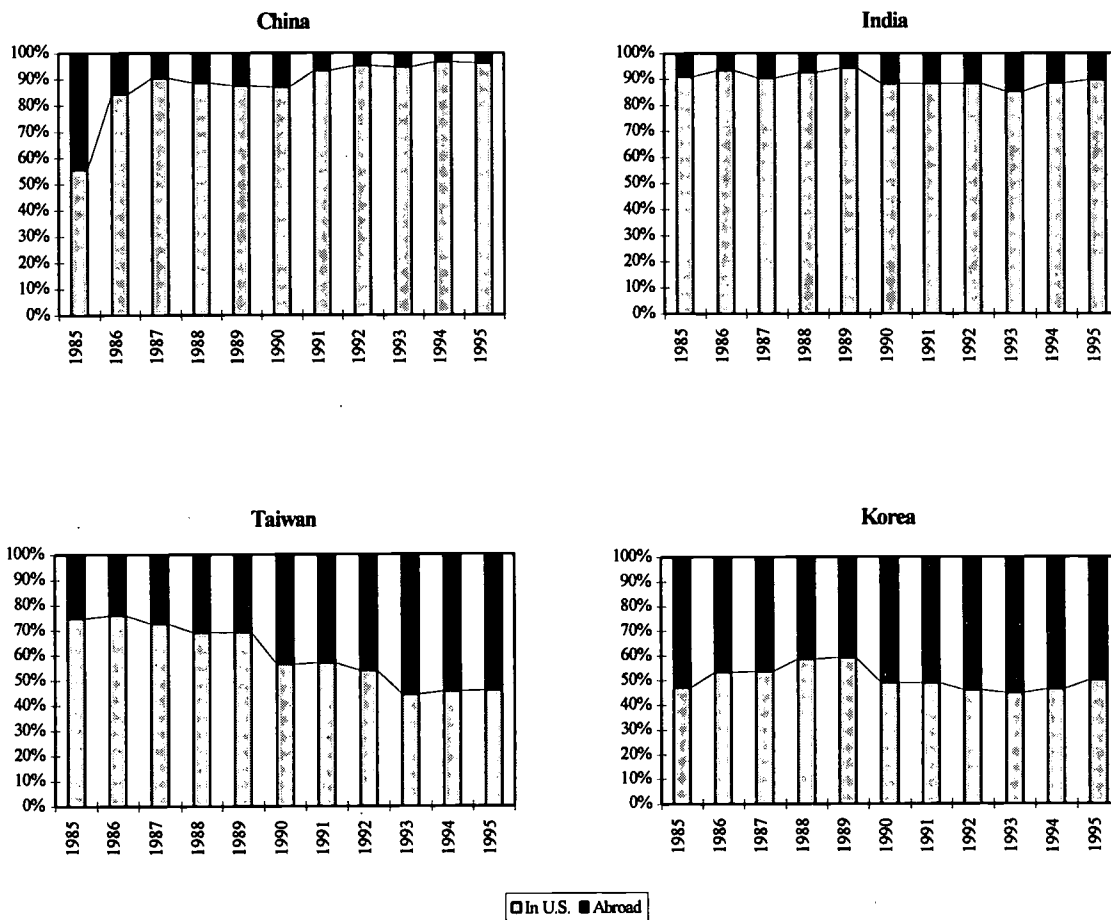

See Table 29, page 85.

SOURCE: National Research Council, Survey of Earned Doctorates.

- For Chinese Ph.D.s with definite commitments in 1995, the largest portion—almost 60 percent—planned postdoctoral study in the U.S. The second largest group—at more than 20 percent—secured positions in industry in the U.S. This latter group grew from about 5 percent in 1985. Meanwhile, the proportion with academic positions, especially abroad, declined from 1985 to 1995. These changes resulted from the shift among Chinese from temporary to permanent visa status, which has allowed the overwhelming majority of Chinese to stay in the U.S. following graduation.
- Indians also tend to have commitments in the U.S. but these commitments are more widely spread over different sectors. The largest group in 1995—at about 35 percent—had postdoctoral study positions in the U.S. The second-largest group had positions in U.S. industry, a group that increased from 21 percent of Indian Ph.D.s in 1985 to 32 percent in 1995. The third-largest group had positions in U.S. education institutions, though their percentage declined from 29 to 19 percent between 1985 and 1995.
- Over the past decade, about half of Koreans with definite employment or postdoctoral study commitments had them in the U.S. (although 71 percent of Koreans seeking work or study at the time they earned their degrees in 1995 were doing so abroad, as noted below). However, Koreans with definite commitments shifted from academic positions abroad to postdoctoral study positions in the U.S., postdoctoral study abroad, and industry abroad. The percentage of Koreans with academic positions abroad decreased from 27 to 12 percent from 1985 to 1995. At the same time, the portions of Koreans securing postdoctoral study positions in the U.S. and abroad rose by about 10 percentage points each. The percentage of Korean Ph.D.s with commitments to work in industry abroad also increased from 6 to 12 percent.
- The percentage of Taiwanese doctorates with academic, industry, or postdoctoral study positions in the U.S. declined, while the percentage with academic positions abroad increased from less than 20 percent in 1985 to almost 30 percent in 1995 and the percentage with postdoctoral study positions abroad increased from 1 percent in 1985 to 10 percent in 1995.

### Seeking Employment or Postdoctoral Study by Location

As seen above, the percentage of non-U.S. Ph.D.s with employment or postdoctoral study commitments at the time the doctorate is earned who stay in the U.S. increased from 55 to 65 percent in the past decade. Meanwhile, the percentage seeking in the U.S. of non-U.S. Ph.D.s who are still seeking commitments at graduation increased substantially from 51 percent in 1985 to 66 percent in 1995. Increasing numbers of Chinese Ph.D.s seeking work or study in the U.S. reinforced this tendency. Taiwanese and Korean Ph.D.s, however, have increasingly sought work or study abroad. (See Table 32, page 93.)

- In 1985, 51 percent of non-U.S. Ph.D.s who were seeking postgraduation commitments were doing so in the U.S., while in 1995, 66 percent were. The percentage of Chinese doctorates seeking work or postdoctoral study in the U.S. at the time of graduation has reinforced this overall increase in the percentage of non-U.S. Ph.D.s seeking work or study in the U.S. at time of degree. Chinese Ph.D.s seeking work or study in the U.S. as a percentage of all Chinese Ph.D.s still seeking at graduation increased from about 64 percent in 1985 to 97 percent in 1995. This resulted from the dramatic increase in the number and percentage of Chinese with permanent visas who stay in the U.S. and thereby increased the number of Ph.D.s in the U.S. labor market for their fields of concentration.
- The percentage seeking work or further study in the U.S. for Ph.D.s from the four leading countries combined has been fairly stable, but this has resulted from two contradictory trends. Chinese Ph.D.s, as noted, increasingly sought commitments in the U.S. as has been the case for Indian Ph.D.s since 1990. By contrast, doctorates from Taiwan and Korea had high and increasing percentages seeking abroad, presumably at home. The percentage of Koreans seeking work or further study abroad of all Koreans still seeking at graduation, for example, began at 53 percent in 1985, increased to 80 percent in 1990, and ended at 71 percent in 1995.

## Summary and Discussion

The number of doctorates awarded annually by U.S. colleges and universities grew by one-third from 1985 to 1995. During that period, the number of doctorates granted to non-U.S. citizens doubled, the growth in non-U.S. citizens accounting for almost two-thirds of the growth in the total number of doctorates awarded. The increase among non-U.S. citizens, moreover, was spurred by rapid increases in the numbers of doctorates awarded to citizens of the four leading countries of origin among non-U.S. citizens—China, India, Taiwan, and Korea. In 1985 those countries accounted for 29 percent of non-U.S. citizens receiving Ph.D.s in the U.S.; in 1995 they accounted for 55 percent. The number of Ph.D.s awarded to citizens of China, in particular, was critical, growing from 137, or 2 percent of all non-U.S. citizens, in 1985 to 2,976, or 23 percent of all non-U.S. Ph.D.s, in 1995.

Each of these four countries is key—due to country size and/or pace of economic growth—to the rapid development and industrialization of east and south Asia. Russell Cheetham, vice president for East Asia at the World Bank, called this growth “a defining event for the world economy” in the late twentieth century and the growing numbers of citizens from these four countries attaining doctorates in the U.S. has simultaneously become a key characteristic of U.S. higher education at the end of the twentieth century.<sup>2</sup>

While these four countries are significant in both the industrialization of Asia and the growing numbers of non-U.S. citizens receiving Ph.D.s in the U.S., the economies, policies, and education systems of these four countries differ substantially enough from one another that they generate remarkably different trends among their citizens in numbers, fields, sources of financing for graduate education, employment status, and whether they intend to stay in the U.S. following graduation. These differences can be summarized as follows:

### 1. China and India:

- Doctorates from China and India continue to grow in number; have high concentrations in the physical and life sciences and engineering; receive higher-than-average levels of university support and lower-than-average foreign government support; stay in the U.S. for some time after receiving their Ph.D.s, regardless of visa status; have growing numbers and percentages seeking work or further study at graduation and, more and more, doing so in the U.S.; and are shifting their job market expectations toward U.S. industry.
- The growth in the number of Chinese attending and receiving doctorates from U.S. colleges and universities has occurred at the same time that China has experienced phenomenal economic growth, at 10 percent or more of gross domestic product annually. Trends among Chinese, though, also track the changing course of China’s study-abroad program and recent events in Chinese politics. Initiated in 1978 as part of Deng Xiaoping’s “Four Modernizations” program for agriculture, industry, defense, and science, the Chinese study abroad program sent scholars—mainly visiting scholars in nondegree programs—abroad to learn science and technology in more advanced Western

facilities and bring home the knowledge gained to help China develop. In 1982 the government increased the percentage of those sent abroad who were graduate students in degree programs. By 1989, however, the government realized that, by contrast with visiting scholars, graduate students tended to stay in the U.S. after completing their degrees, thereby generating a low return on the government's investment.<sup>3</sup> As one student of the process observed, "The prospects of mismatched positions, low ranks, little funding, and housing problems were strong disincentives to return: the 'push.' Opportunities to save money while working and studying abroad 'pulled' students. The political climate was also a concern for many, especially in 1987 with the purge of Hu Yaobang and several prominent intellectuals and also with the hardline taken against the 1989 democracy movement."<sup>4</sup> In response to this brain drain, or "delayed return problem," the government reduced the proportion of graduate students in its state-financed program in the late 1980s, though at the same time it liberalized its policies on allowing "self-financed" students to go abroad. Despite Chinese "reverse brain drain" policies instituted recently, the number of Ph.D.s from China has continued to increase and they are staying in the U.S. following graduation.<sup>5</sup> In the process, as we have seen, they have also shifted sources of support, relying less on the Chinese government and more on personal and university resources.

- The politics and economy of India have so far generated similar trends. While not as robust as that in China, economic growth in India has recently been substantial, currently at 8 percent annual growth in gross domestic product. In addition, Indian entrepreneurs and government agencies have begun to move beyond India's decades-old import substitution policies to more high-tech and export-driven industries. One result has been the development of an "Indian Silicon Valley" in the Bangalore area and the investment of government funding in software technology parks. Still, this growth is recent and not yet substantial enough to create the level of change and opportunities that would lure Indians earning Ph.D.s in the U.S. back to the subcontinent. Thus, the number of Indians receiving Ph.D.s in the U.S. increased over the past decade and may continue to do so; the large percentage of Indians staying in the U.S. after graduation will likely stay high, at least for some time; and the percentage of Indians seeking positions in the U.S. and obtaining them in U.S. industry will likely continue to increase.<sup>6</sup>

## 2. Taiwan and Korea

- Trends among Ph.D.s from Taiwan and Korea—two of the "Four Dragons" of East Asia—present a contrast to trends among Ph.D.s from China and India. These two countries have experienced longer and higher levels of industrialization to date. Thus, their Ph.D.s have different ties to and opportunities at home. Trends among Ph.D.s from Taiwan and Korea reflect this: citizens of Taiwan and Korea receiving Ph.D.s in the U.S., after substantial increases over the past decade, decreased in number from 1994 to 1995; have—in the case of Korea—a wider distribution among fields of study; are more likely to draw on personal (including family) and foreign government support during their studies; are more apt to return home; have an increasing percentage seeking work or study, though with significantly higher proportions doing so at home; have larger

percentages working in the academic and governmental sectors, respectively; and have increasing percentages with postdoctoral study positions abroad.

- The data on Taiwan indicate recent and continued growth of Taiwanese higher education. Increasing percentages of Taiwanese with definite commitments plan to work in academia abroad, presumably in Taiwan, rising from about 20 percent in 1985 to 34 percent in 1993 and 1994 and 30 percent in 1995. In addition, the percent of Taiwanese with definite commitments who have postdoctoral study appointments abroad grew from 1 percent to 10 percent during the same period. Given this development, the number of Taiwanese seeking Ph.D.s in the U.S. may decline in the future as they increasingly pursue degrees in Taiwan.
- The data on Korean Ph.D.s suggest a more mature educational establishment, the development of which has been a key integrated component of Korea's industrialization strategy. During the late 1980s, when the number of Korean colleges, universities, and graduate schools increased substantially, 20 to 30 percent of all Koreans earning Ph.D.s in the U.S. who had definite commitments had them in academia abroad. While this figure declined into the teens in the 1990s, the percentage of Koreans with commitments for postdoctoral appointments in the U.S. and, significantly, abroad increased. Also, the percentage of Koreans with definite commitments abroad in industry and government likewise increased. Meanwhile, more than 70 percent of all Koreans still seeking postgraduation commitments do so abroad. This confirms that, in contrast to Chinese and Indians, a majority of Koreans still return home. Finally, as with the Taiwanese, the number of Koreans earning Ph.D.s in the U.S. declined from 1994 to 1995. With a mature academic establishment, more and more Koreans, like Taiwanese, may pursue their Ph.D.s at home.<sup>7</sup>

If these trends continue, there may be a leveling off in the growth of non-U.S. Ph.D.s as increases in Chinese and Indians are canceled by decreases among Taiwanese and Koreans. This contrasts with trends among U.S. citizens that indicate an overall increase for the foreseeable future, especially among U.S. minorities. There are, however, two caveats. First, when China takes control of Hong Kong on July 1, 1997, a burgeoning scientific and educational sector in the British colony may both serve the educational needs of Chinese students and attract Chinese Ph.D.s back to China. This could marginally affect the number of Chinese Ph.D.s earning degrees from U.S. universities and may also affect where those earning Ph.D.s in the U.S. seek work or postdoctoral study.<sup>8</sup> Second, other new economic "dragons" in east or south Asia may generate additional growth in the number of non-U.S. citizens enrolling in and receiving doctorates from graduate schools in the United States.

TABLE 18 Top 30 Countries of Origin of Non-U.S. Citizens Earning Ph.D.s at U.S. Colleges and Universities, 1995 (ranked on number of Ph.D.s)

Country	Number	Country	Number
1. China*	2,976	16. Hong Kong	120
2. Taiwan*	1,484	17. France	117
3. India	1,423	18. Italy	116
4. Korea†	1,305	19. Malaysia	113
5. Canada	524	20. Israel	113
6. Germany	306	21. Saudi Arabia	108
7. Japan	232	22. Indonesia	106
8. England	220	23. Spain	102
9. Greece	197	24. Nigeria	99
10. Iran	195	25. Egypt	92
11. Thailand	189	26. Australia	89
12. Turkey	188	27. Sri Lanka	83
13. Brazil	175	28. Argentina	77
14. Mexico	162	29. Jordan	72
15. Pakistan	137	30. The Netherlands	70
<i>Top 30 Countries of Origin</i>			<i>11,190</i>
<i>Total Countries Reported (146)</i>			<i>13,029</i>

NOTE: The total number of non-U.S. citizens who earned doctorates in 1995 was 13,113; nearly all (13,029 Ph.D.s) reported their country of origin. See technical notes in Appendix C for rates of nonresponse to the questions on country of citizenship and citizenship status.

\*An additional 13 Ph.D.s indicated "China" as their country of citizenship, but the specific origin could not be determined. Data for these recipients are excluded from this table.

†Includes "Korea" (unspecified). The Democratic People's Republic of Korea (North Korea) does not permit its citizens to study in the United States.

TABLE 24 Sources of Support for Doctorate Recipients, by Citizenship Status and Leading Non-U.S. Countries of Origin, 1987-1995

U.S. Citizens					
Year	Personal	U.S. Government	Foreign Government	University	Other
1987	86.7%	16.2%	0.3%	74.7%	13.1%
1988	85.7	15.1	0.4	75.5	13.6
1989	85.3	14.8	0.5	76.0	13.9
1990	87.5	13.8	0.4	74.4	15.4
1991	86.7	14.3	0.4	74.2	15.9
1992	88.1	13.8	0.5	76.4	18.7
1993	87.9	14.8	0.5	76.9	19.0
1994	86.0	14.5	0.5	76.2	17.7
1995	84.7	14.4	0.5	76.2	16.9

Non-U.S. Citizens					
Year	Personal	U.S. Government	Foreign Government	University	Other
1987	58.1%	3.5%	14.3%	84.4%	12.6%
1988	58.1	4.5	18.5	85.8	9.5
1989	57.4	4.1	17.5	87.7	9.5
1990	55.1	3.0	16.4	86.9	9.1
1991	52.8	3.2	14.5	87.9	9.4
1992	53.3	3.0	13.6	89.6	10.2
1993	52.9	3.5	12.8	89.9	10.6
1994	52.4	3.3	12.1	88.9	10.0
1995	51.3	3.5	11.1	89.8	8.8

China					
Year	Personal	U.S. Government	Foreign Government	University	Other
1987	14.1%	1.7%	13.1%	98.3%	7.6%
1988	12.9	1.4	19.6	98.8	5.7
1989	13.7	2.0	19.6	98.9	6.4
1990	15.9	0.4	13.2	98.4	4.8
1991	15.9	1.1	9.4	99.0	4.7
1992	20.4	1.0	7.7	99.0	4.9
1993	23.7	1.1	5.3	98.6	5.2
1994	24.8	1.6	2.8	98.4	5.4
1995	25.7	1.8	1.4	98.5	4.5

NOTE: In this table a doctorate recipient is included in each source category that he or she reported. Since doctorates may indicate multiple sources of support, percentages sum horizontally to more than 100 percent. See technical notes in Appendix C for rates of nonresponse to the survey question on sources of support.

1995	81.7	1.5	5.5	90.4	5.0

NOTE: In this table a doctorate recipient is included in each source category that he or she reported. Since doctorates may indicate multiple sources of support, percentages sum horizontally to more than 100 percent. See technical notes in Appendix C for rates of nonresponse to the survey question on sources of support.

## APPENDIX A: The Seven Basic Tables, 1995

Appendix A includes the following seven tables:

- A-1 Number of Doctorate Recipients, by Gender and Subfield, 1995
- A-2 Number of Doctorate Recipients, by Citizenship, Race/Ethnicity, and Subfield, 1995
- A-3 Statistical Profile of Doctorate Recipients, by Major Field, 1995
- A-4 Statistical Profile of Doctorate Recipients, by Race/Ethnicity and Citizenship, 1995
- A-5 Sources of Graduate School Support for Doctorate Recipients, by Broad Field and Gender, 1995
- A-6 State of Doctoral Institution of Doctorate Recipients, by Broad Field and Gender, 1995
- A-7 Institutions Granting Doctorates, by Major Field, 1995

**TABLE A-1 and TABLE A-2:** Tables A-1 and A-2 display data for the most recent year by subfield of doctorate. The subfields correspond to the fields on the questionnaire's Specialties List located at the back of this report. Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates (SED). See inside the back cover for a description of field groupings as reported in these tables. The "general" field categories—e.g., "chemistry, general"—include individuals who either received the doctorate in the general subject area or did not indicate a particular specialty field. The "other" field categories—e.g., "chemistry, other"—include individuals whose specified doctoral discipline was not among the specialty fields.

Table A-1 presents data by doctoral specialty and gender. Table A-2 displays doctoral specialty by citizenship and race/ethnicity. For a detailed description of the racial/ethnic variable, see the explanatory note for Table A-4.

**TABLE A-3:** Table A-3 is composed of three 2-page tables. The first table includes data on *all* doctorate recipients for the most recent year; the other two tables present the same data by gender. Field groupings may differ from those in reports published by federal sponsors of the SED. See inside the back cover for a description of field groupings as reported in these tables; see the questionnaire's Specialties List at the back of the report for the names and codes of the subfields included. Terms requiring definition are as follows:

- *Percentage with Master's:* The percentage of doctorate recipients in a field who received a master's degree in any field before earning the doctorate.
- *Median Age at Doctorate:* One-half received the doctorate at or before this age. A recipient's age is obtained by subtracting the month/year of birth from the month/year of doctorate. (See note on next page.)
- *Median Time Lapse:* "Total time" refers to the total calendar time elapsed between the month/year of baccalaureate and the month/year of doctorate; "registered time" refers to the actual time in attendance at colleges and universities between receipt of the

baccalaureate and the doctorate. Enrollment includes years of attendance not related to a recipient's doctoral program.

**NOTE about medians:** *The method of computing medians has been revised. Beginning with Summary Report 1994, months (of birth, baccalaureate, and doctorate) are included in the calculations whenever available; if months are missing, only years are used in the calculations. Medians presented in all earlier reports were based only on years. Some medians would be the same regardless of the method of computation, but the new method generally computes slightly different results. While differences are small (usually one- or two-tenths of a year), the reader should consider these differences when comparing medians presented in this report with those in earlier reports.*

**Postgraduation Plans:** Each year's doctorate recipients provide information on post-graduation employment or study plans in response to items 20-24 on the survey form. Since the questionnaire is filled out around the time the doctorate is awarded, a recipient's plans are subject to change. However, comparisons with the longitudinal Survey of Doctorate Recipients (SDR) have shown SED data to be a reasonable indicator of actual employment status in the year following the doctorate, although results vary by sector. (The SDR, also conducted by the National Research Council, is a follow-up employment survey of a sample of doctorate recipients in science, engineering, and humanities fields.) Refer to the footnote on page 139 in Appendix C for additional information on Ph.D.s who reported *definite* commitments at the time they completed the SED questionnaire.

In Table A-3 the postgraduation plans of doctorate recipients are grouped as follows: "Postdoctoral Study Plans" (fellowship, research associateship, traineeship, other), "Planned Employment After Doctorate" (educational institution, industry, etc.), and "Postdoctoral Plans Unknown." These categories include recipients who were still negotiating or seeking positions at the time of survey completion, as well as those whose plans were definite. The sum of these lines equals 100 percent for each column, with allowance for rounding: for example, 23.4 percent of all engineers had postdoctoral study plans, 67.9 percent planned to be employed, and 8.7 percent did not report their postgraduation plans, totaling 100 percent. The study and employment rows are further subdivided. The data on study plans show that 8.1 percent of all engineers planned to pursue postdoctoral fellowships; 13.4 percent, research associateships; 0.9 percent, traineeships; and 1.0 percent, some other form of postdoctoral study. These percentages sum to 23.4 percent, the proportion of engineers who reported plans for postdoctoral study. The employment row is similarly subdivided by type of employer. The percentages for these rows add to 67.9 percent—the proportion of engineering Ph.D.s who planned employment. The category for educational institutions includes elementary and secondary schools as well as colleges and universities, and the category for government includes military service.

The four lines of data beginning with "Definite Postdoctoral Study" distinguish between individuals who had definite postgraduation plans at the time of survey completion (item 20: "Am returning to, or continuing in, predoctoral employment" or "Have signed contract or made definite commitment") and those who were still seeking employment or postdoctoral study (item 20: "Am negotiating with one or more specific organizations," "Am

seeking position but have no specific prospects," or "Other"). These four lines, when added to the prior line, "Postdoctoral Plans Unknown," total 100 percent with allowance for rounding. The two lines "Definite Postdoctoral Study" and "Seeking Postdoctoral Study" add to give the percentage for "Postdoctoral Study Plans"; the two lines "Definite Employment" and "Seeking Employment" add to give the percentage for "Planned Employment After Doctorate."

Percentages showing the distribution of doctorate recipients by postdoctoral work activity and region of employment are based only on the number of recipients who had *definite employment* commitments at the time they completed the questionnaire. These percentages exclude recipients who planned postdoctoral study (as described above) and recipients who were still *seeking* employment at the time they completed the questionnaire. (Note that the rows on specific postdoctoral study and employment plans discussed earlier include individuals whose plans were *not definite*.) Revisions to the questionnaire format beginning in 1990 appear to have resulted in higher rates of nonresponse to the item on work activity through 1993, when the rate was 15.1 percent. The questionnaire was revised again in 1994 and, subsequently, nonresponse has dropped the past two years to 11.9 percent in 1994 and 10.7 percent in 1995.

The U.S. regions of employment shown in Table A-3 include the following states and territories:

<i>New England:</i>	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
<i>Middle Atlantic:</i>	New Jersey, New York, Pennsylvania
<i>East North Central:</i>	Illinois, Indiana, Michigan, Ohio, Wisconsin
<i>West North Central:</i>	Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
<i>South Atlantic:</i>	Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia
<i>East South Central:</i>	Alabama, Kentucky, Mississippi, Tennessee
<i>West South Central:</i>	Arkansas, Louisiana, Oklahoma, Texas
<i>Mountain:</i>	Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming
<i>Pacific &amp; Insular:</i>	Alaska, California, Hawaii, Oregon, Washington, American Samoa, Guam, Puerto Rico, Trust Territory, Virgin Islands

**TABLE A-4:** Table A-4 contains data by race/ethnicity and citizenship for selected variables included in Tables A-3 and A-5. Field groupings may differ from those in reports published by federal sponsors of the SED. See inside back cover for a description of field groupings as reported in these tables; refer to the questionnaire's Specialties List at the back of the report for the names and codes of the subfields included.

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget

(OMB) for use in federally sponsored surveys; an explanation of the effect of these changes is detailed on page 13 of *Summary Report 1977*. (Note: Changes in the OMB guidelines prompted the moving of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980 the item was further revised in two ways: (1) the Hispanic category was subdivided into Puerto Rican, Mexican American, and other Hispanic to provide more detail for users of the racial/ethnic data, and (2) respondents were asked to check only one racial category. (Before 1980, doctorate recipients could check more than one category to indicate their race.) The item was modified again in 1982 to separate the questions on race and ethnicity. Since then, respondents have been asked to first check one of the four racial group categories (American Indian, Asian, black, or white) and then indicate whether or not they are Hispanic. In Table A-4, Ph.D.s who reported Hispanic heritage, regardless of racial designation, are included in one of three Hispanic groups: Puerto Rican, Mexican American, or other Hispanic. The remaining survey respondents are then counted in the respective racial groups. (Note: Doctorate recipients who checked the category "American Indian or Alaskan Native" are identified as American Indian in this report.)

*NOTE about median age and time lapse (to doctorate): The method of computing medians has been revised. Beginning with Summary Report 1994, months (of birth, baccalaureate, and doctorate) are included in the calculations whenever available; if months are missing, only years are used in the calculations. Medians presented in all earlier reports were based only on years. Some medians would be the same regardless of the method of computation, but the new method generally computes slightly different results. While differences are small (usually one- or two-tenths of a year), the reader should consider these differences when comparing medians presented in this report with those in earlier reports. See note on Table A-3 for definitions.*

In the section on "Graduate School Support," a recipient counts in more than one category if support was received from multiple sources. Because a student counts once for each of his/her sources of support, the vertical percentages sum to more than 100 percent. See the explanatory note in Appendix Table A-5 for further detail. (Data on the *primary* source of support for doctorate recipients are presented in the body of the report.)

The other sections of Table A-4 correspond to many of those in Appendix Table A-3. The reader is referred to the explanatory note in Table A-3 for additional information.

**TABLE A-5:** Table A-5 displays data reported in item 17 on sources of financial support received during graduate school, by broad field and gender of recipient. Field groupings may differ from those in reports published by federal sponsors of the SED. See inside back cover for a description of field groupings as reported in this table; see the questionnaire's Specialties List at the back of the report for the names and codes of the subfields included.

A recipient counts in more than one category in Table A-5 if support was received from multiple sources. Because a student counts once for each of his/her sources of support, the vertical percentages sum to more than 100 percent. (Data on the *primary* source of support for doctorate recipients are presented in the body of the report.)

Beginning with *Summary Report 1990*, federal research assistantships (RAs) have been aggregated with university RAs and shown under "University Research Assistant" in this table. (Focus groups of doctoral candidates have indicated uncertainty as to the source of their RA funding; it is therefore likely that some RAs incorrectly identified support provided by the federal government as university rather than federal.) The reader is advised *not* to compare sources of support data presented in the 1990-1995 *Summary Reports* with data in earlier reports because percentages appear higher for university support and lower for federal support in tables where all RAs are aggregated as "University Research Assistants."

The data in Table A-5 should be interpreted as follows: 168 male doctorate recipients in the physical sciences in 1995 reported financial support from federal fellowships or traineeships during graduate school. This number is 3.4 percent of the male physical sciences Ph.D.s who answered the question on sources of support and 13.7 percent of all males in *any* field who reported federal fellowship or traineeship support.

**TABLE A-6:** Table A-6 shows, by broad field and gender, the number of persons receiving a doctorate in the most recent year from institutions in each of the 50 states, the District of Columbia, and Puerto Rico. Field groupings may differ from those in reports published by federal sponsors of the SED. See inside back cover for a description of field groupings as reported in this table; see the questionnaire's Specialties List at the back of the report for the names and codes of the subfields included.

**TABLE A-7:** Table A-7 displays data by doctorate-granting institution and major field. It includes all institutions in the United States (the 50 states, the District of Columbia, and Puerto Rico) that awarded doctoral degrees in the most recent year. Field groupings may differ from those in reports published by federal sponsors of the SED and from departmental designations at institutions. See inside back cover for a description of field groupings as reported in this table; see the questionnaire's Specialties List at the back of the report for the names and codes of the subfields included.

APPENDIX TABLE A-1 Number of Doctorate Recipients, by Gender and Subfield, 1995

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See inside the back cover for a description of fields as reported in this table. Physical Sciences includes Mathematics and Computer Sciences, as well as Physics/Astronomy, Chemistry, and Earth/Atmospheric/Marine Sciences. Refer also to the explanatory note for this table.

\*The method of median computation has been revised. See page 100 for more information.

†Includes 2-year, 4-year, and foreign colleges and universities, medical schools, and elementary/secondary schools.

‡Includes only recipients with definite employment plans.

§Includes only recipients with definite employment plans. See Table A-3 explanatory note for regional definitions.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See inside the back cover for a description of fields as reported in this table. Physical Sciences includes Mathematics and Computer Sciences, as well as Physics/Astronomy, Chemistry, and Earth/Atmospheric/Marine Sciences. Refer also to the explanatory note for this table.

\*The method of median computation has been revised. See page 100 for more information.

†Includes 2-year, 4-year, and foreign colleges and universities, medical schools, and elementary/secondary schools.

‡Includes only recipients with definite employment plans.

§Includes only recipients with definite employment plans. See Table A-3 explanatory note for regional definitions.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See inside the back cover for a description of fields as reported in this table. Physical Sciences includes Mathematics and Computer Sciences, as well as Physics/Astronomy, Chemistry, and Earth/Atmospheric/Marine Sciences. Refer also to the explanatory note for this table.

\*The method of median computation has been revised. See page 100 for more information.

†Includes 2-year, 4-year, and foreign colleges and universities, medical schools, and elementary/secondary schools.

‡Includes only recipients with definite employment plans.

§Includes only recipients with definite employment plans. See Table A-3 explanatory note for regional definitions.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See inside the back cover for a description of fields as reported in this table. Refer also to the explanatory note about this table in front of Appendix A for a discussion of past changes in the survey question on race/ethnicity.

\*Includes individuals who did not report their citizenship at time of doctorate.

†The method of median computation has been revised. See page 102 for more information.

‡In this table a recipient counts once in each source category from which he or she received support. Since students indicate multiple sources of support, the vertical percentages sum to more than 100 percent. (Data on the "primary" source of support for doctorate recipients are presented in the body of the report.)

§Because federal support obtained through the university cannot always be determined, no distinction is made between federal and university research assistants in this table. Both types of support are grouped under "University Research Assistant." Federal loans are counted in the categories for loans.

|| Includes 2-year, 4-year, and foreign colleges and universities, medical schools, and elementary/secondary schools.

#Includes only recipients with definite employment plans.

NOTE: In this table a recipient counts once in each source category from which he or she received support. Since students indicate multiple sources of support, the vertical percentages sum to more than 100 percent. (Data on the "primary" source of support for doctorate recipients are presented in the body of the report.) Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See inside the back cover for a description of fields as reported in this table. Refer also to the explanatory note about this table in front of Appendix A.

\*V denotes vertical percentage; H denotes horizontal percentage.

†Because federal support obtained through the university cannot always be determined, no distinction is made between federal and university research assistants in this table. Both types of support are grouped under "University Research Assistant." Federal loans are counted in the categories for loans.

‡The 2,770 Ph.D.s who did not report sources of support are omitted from this total. Percentages are based only on known responses.

SOURCE: National Research Council, Survey of Earned Doctorates.

## APPENDIX B: Trend Tables, 1985-1995

Appendix B includes the following two tables:

- B-1 Number of Doctorate Recipients, by Subfield, 1985-1995
- B-2 Number of Doctorate Recipients, by Gender, Race/Ethnicity, and Citizenship, 1976, 1980, and 1985-1995

**TABLE B-1:** Table B-1 presents data for the most recent decade by subfield of doctorate. In general, the subfields correspond to the fields on the questionnaire's Specialties List located at the back of this report; some, however, do not appear on the current Specialties List because they are no longer included in the survey taxonomy. A dash (-) in a column indicates that the field was not on the Specialties List for that year.

Field groupings in this table may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates (SED); see inside the back cover for a description of field groupings as reported in these tables. The "general" field categories—e.g., "chemistry, general"—include individuals who either received the doctorate in the general subject area or did not indicate a particular specialty field. The "other" field categories—e.g., "chemistry, other"—include individuals whose specified doctoral discipline was not among the specialty fields.

The seven tables in Appendix A present additional information on the most recent cohort of Ph.D.s by field of doctorate.

**TABLE B-2:** Table B-2 displays, by gender and citizenship, data on the race/ethnicity of doctorate recipients for 1976, 1980, and the past decade. Table B-2 contains three panels, each displayed on a separate page. The first panel includes all doctorates; the others disaggregate the data by gender.

*The reader should note that numbers in Table B-2 have been revised since publication of Summary Report 1994. Because of late questionnaire returns and responses to follow-ups for missing information, data are subject to revision in the year after survey closure. New follow-up procedures implemented in 1990 and later years have increased coverage of several variables, including citizenship and race/ethnicity. One result has been greater postsurvey adjustment to racial/ethnic data than in earlier years. (Note: The greatest adjustment was to the numbers of black Ph.D.s in 1990 and 1991—an increase of about 7.5 percent each year.) Updates to 1994 racial/ethnic data are shown in Table B-2 in this year's report.*

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget (OMB) for use in federally sponsored surveys; an explanation of the effect of these changes is

detailed on page 13 of *Summary Report 1977*. (Note: Changes in the OMB guidelines prompted the moving of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980 the item was further revised in two ways: (1) the Hispanic category was subdivided into Puerto Rican, Mexican American, and other Hispanic to provide more detail for users of the racial/ethnic data, and (2) respondents were asked to check only one racial category. (Before 1980, doctorate recipients could check more than one category to indicate their race.) The item was modified again in 1982 to separate the questions on race and ethnicity. Since then, respondents have been asked to first check one of the four racial group categories (American Indian, Asian, black, or white) and then indicate whether or not they are Hispanic. In Table B-2, *Ph.D.s who reported Hispanic heritage, regardless of racial designation, are counted as Hispanic*. The remaining survey respondents are then counted in the respective racial groups. (Note: Doctorate recipients who checked the category "American Indian or Alaskan Native" are identified as American Indian in this report.)

Tables A-2 and A-4 in Appendix A present additional information on the most recent cohort of Ph.D.s by race/ethnicity.

## APPENDIX C: Technical Notes

SURVEY RESPONSE RATES*			
Year	Self-Report Rate	Year	Self-Report Rate
1965	97.4	1981	95.7
1966	96.3	1982	95.3
1967	97.3	1983	95.5
1968	97.6	1984	95.1
1969	96.6	1985	94.8
1970	98.1	1986	93.5
1971	97.5	1987	93.1
1972	97.3	1988	92.9
1973	97.5	1989	92.3
1974	94.2	1990	93.6
1975	97.3	1991	94.6
1976	97.2	1992	95.1
1977	96.6	1993	94.7
1978	96.3	1994	94.6
1979	96.4	1995	94.3
1980	96.2		
<p>* The rates for 1965-1994 reflect late responses. The rate for 1995 may increase slightly in the next year if additional questionnaires are received after survey closure. Self-report rates for 1980-1995 are determined from the "source of response" indicator in the doctorate records. Because this indicator was not coded prior to 1980, survey forms for 1965-1979 are assumed to be self-reported if "month signed" or "marital status" is present. "Marital status" is not available from sources other than the doctorate recipient.</p>			

As shown above, 94.3 percent of all doctorate recipients in 1995 completed survey forms; this percentage is referred to as the "self-report" rate. For the remaining 5.7 percent of recipients, "skeletal" forms were created with information from doctorate-granting institutions or commencement programs. Whether or not individuals completed the survey questionnaire, the following four data items are available for all recipients: gender, Ph.D. institution, Ph.D. field, and Ph.D. year.

This report presents data obtained from *all* survey forms, both self-reported and skeletal. Readers should note that nonresponse in a tabulation varies according to the *combination* of selected variables. Higher nonresponse rates occur when any of the four variables mentioned above are cross-tabulated with another variable (e.g., educational debt) because the universe consists of the entire doctoral cohort. In other words, the 5.7 percent of Ph.D.s who did not respond to the survey are included, even though their records contain minimal information. Nonresponse is generally lower when citizenship or race/ethnicity is cross-tabulated with a variable such as debt because the population is restricted to a group (e.g., U.S. citizens) that is largely drawn from self-reported forms

and thus more likely to have responses to the debt question. To be more precise, information on debt was not available for only 5.1 percent of U.S. citizens in 1995; nonresponse was low because data on both citizenship and debt were obtained mostly from self-reported forms. Nonresponse was higher for the entire 1995 cohort (7.7 percent) because it included the 5.7 percent of forms that were only partially filled in by institutions or staff of the National Research Council. The same was true for men (7.5 percent) and women (7.1 percent) because gender was known even for Ph.D.s who did not complete a survey form. Cross-tabulating debt with field of doctorate would yield similarly high nonresponse rates because Ph.D. field is available for all recipients.

The percentages shown in the tables and figures in the body of this report are based only on the number of doctorate recipients who *responded* to the applicable survey questions.<sup>1</sup> Appendix C presents nonresponse rates for the variables included in these tables and figures; it also provides descriptive explanations of the data as needed. For additional technical information, please contact:

Doctorate Records Project  
National Research Council

Phone: (202) 334-3161

---

<sup>1</sup> Note that the percentages in Appendix Tables A-3 and A-4 are based on the total doctoral cohort because categories for "unknown" responses are included. See the notes in front of Appendix A for further explanation of these data.

### ***Baccalaureate Institutions of U.S. Minorities***

Table 4 is restricted to U.S. minority Ph.D.s (native and naturalized citizens) from 1991 to 1995 who earned baccalaureates at institutions *located in the United States*. Because this population constitutes only 89.2 percent of all U.S. minority Ph.D.s in this period, the totals shown in Table 4 for each group are not all-inclusive. Another 9.4 percent—mostly naturalized Asians and Hispanics—received baccalaureates from foreign institutions, and the remaining 1.4 percent either did not earn a baccalaureate degree or did not report this information. The totals for all U.S. minority Ph.D.s regardless of baccalaureate status are: 4,611 Asians (57.3 percent naturalized); 5,462 blacks (7.6 percent naturalized); 4,143 Hispanics (20.4 percent naturalized); and 689 American Indians (1.0 percent naturalized).

### ***Country of Citizenship (for non-U.S. Ph.D.s)***

Country of citizenship (if missing) was first followed up in the 1990 survey. Consequently, nonresponse has been much lower in recent years than prior to 1990. Nonresponse was only 0.6 percent in 1995, compared to 9.9 percent in 1989. Tables 18-19 and 21-32 present data on country of citizenship.

### ***Postgraduation Plans***

*Postgraduation status:* The question on postgraduation status asks recipients to indicate whether they have made a "definite" commitment, are in the process of "negotiating" with one or more organizations, or are seeking a position but have no specific prospects. Because Ph.D.s sometimes complete the survey form months ahead of graduation, it is not possible to determine the final plans of all recipients. It is quite likely that some individuals who check "negotiating" or "seeking" have obtained positions by the time of graduation. Data on postgraduation plans in this report are restricted to the group of Ph.D.s who reported "definite" plans.<sup>2</sup>

---

<sup>2</sup> Comparisons with the most recent longitudinal Survey of Doctorate Recipients (SDR) show the data on "definite" postgraduation plans to be a reasonable indicator of the actual employment status of new Ph.D.s in the first year or so following receipt of the doctorate. (The SDR, also conducted by the National Research Council, is a follow-up employment survey of a sample of doctorate recipients in science, engineering, and humanities fields.) According to the 1993 SDR, 97 percent of new 1992 Ph.D.s with "definite" plans at the time of graduation were employed in the U.S. labor force in April 1993 (postdoctoral appointments included). Moreover, most were working in the sector reported on their SED survey forms. It is important to note that the April 1993 reference point for the SDR fell 9-22 months after graduation for the 1992 Ph.D.s. This gap in time provides a plausible explanation for movement between sectors.

---

NOTE: In 1995, 94.1 percent of new doctorate recipients completed the survey form. The item nonresponse rates in this table include the 5.9 percent of recipients who were not self-reporting. Because missing information is sometimes obtained from the doctorate-granting institutions or commencement programs, nonresponse rates for the following variables may be lower than the survey's 5.9 percent rate of nonresponse: citizenship, gender, race/ethnicity, baccalaureate institution, and total time to doctorate (derived from baccalaureate year). Field, institution, and year of doctorate are available for all recipients, as is gender.

x = Year not shown in tables and figures.

## NONRESPONSE RATES FOR ITEMS IN TABLES (Continued)

1975	1980	1985	1990	1995	1991- 1995	Data Item
x	x	x	x	x	1.1	Baccalaureate Institution (U.S. minorities)
1.9	2.8	4.4	3.8	2.1	2.3	Citizenship
x	x	x	2.8	0.6	x	Country of Citizenship (for non-U.S. citizens)
x	x	x	x	7.7	x	Debt Status
0.0	0.0	0.0	0.0	0.0	x	Doctorate Field
x	x	x	x	0.0	x	Doctorate Institution
0.0	0.0	0.0	0.0	0.0	0.0	Doctorate Year
0.0	0.0	0.0	0.0	0.0	x	Gender
						Postdoctoral Location (for definite commitments)
3.4	6.3	8.4	8.1	0.8	x	Non-U.S. citizens (any type of plans)
2.3	5.5	6.8	3.2	0.1	x	U.S. citizens & permanent visas (employment plans)
3.1	6.4	8.2	5.8	0.5	x	Temporary visas (employment plans)
0.9	0.4	0.4	0.5	0.6	x	Postdoctoral Plans (e.g., definite employment vs. study)
						Postdoctoral Sector (for definite employment in U.S.)
0.6	0.6	1.1	1.1	1.7	x	U.S. citizens & permanent visas
0.0	0.0	0.4	0.4	1.3	x	Temporary visas
5.4	7.3	9.3	9.3	9.1	x	Postdoctoral Status (e.g., definite vs. seeking)
x	x	x	x	25.2	x	Primary Source of Graduate School Support
						Race/Ethnicity
4.1	4.9	2.2	1.5	1.1	1.2	U.S. citizens
4.8	4.8	2.2	1.6	1.1	x	U.S. citizens & permanent visas
8.6	11.2	13.0	22.6	18.3	x	Registered Time to Doctorate (computed)
1.6	3.0	4.0	5.0	4.5	x	Total Time to Doctorate (computed)

x = Year not shown in tables and figures.

*Definite commitments:* Tables 13-16 and 27-31 include only those Ph.D.s who reported definite postgraduation commitments and, therefore, do not reflect the entire Ph.D. population. The proportions of each doctoral cohort reporting definite commitments are shown below:

Year	% Definite
1975	69.6
1980	70.7
1985	66.9
1990	64.9
1995	59.7

NOTE: These percentages are not adjusted for nonresponse to the question on postgraduation status; nonresponse rates ranged from 5 to 9 percent during these years. See chart of item nonresponse rates for detail.

*Postdoctoral location:* Revisions to the survey form have resulted in significant increases in response rates for postdoctoral location during the past few years. Doctorate recipients can now check a box for "U.S." or "non-U.S." instead of providing the name and exact location of the organization with which they will be affiliated after the doctorate. This explains the much lower nonresponse in 1995 than in earlier years shown in Tables 15-16, 25, and 29-32. See chart of item nonresponse rates for detail.

*Postdoctoral employment commitments in the U.S.:* To be included in Tables 15 and 16, Ph.D.s must have reported definite commitments for employment. Foreign locations and employers are excluded. For temporary residents, a U.S. location must have been reported. For U.S. citizens and permanent residents, unknown locations are assumed to be in the United States because of the high "stay" rates for both groups. Based on actual responses to the 1995 survey, 96 percent of U.S. citizens with employment or study commitments intended to remain in the United States, as did 92 percent or more of permanent residents.

### ***Primary Source of Graduate School Support***

Although 93.3 percent of doctorate recipients in 1995 answered the question on sources of financial support, only 74.8 percent designated a *primary* source—giving this item the highest item nonresponse rate for the survey. Even so, the nonresponse rate of 25.2 percent in 1995 was 9 points less than the 33.8 percent two years ago. This decrease in nonresponse was likely a result of moving the sentence that requests designation of primary source to the beginning of the question's instructions. Nonresponse should drop further in the 1996 survey because all Ph.D.s will have completed forms containing the clarified instructions; in 1995, 28 percent of the doctorate recipients filled out earlier versions of the questionnaire.

### *Race/Ethnicity*

*Adjustments to numbers:* Readers should keep in mind that fluctuations in numbers for a racial/ethnic group reflect to some degree any upward or downward change in both overall survey response and response to the racial/ethnic item. Since 1990, response to race/ethnicity has shown great improvement—a result of new procedures for following up missing information. Race/ethnicity was not followed up prior to 1990.

All follow-up responses received before survey closure are included in the data presented in the *Summary Report* for that survey. Responses arriving after closure are included in the next year's report. The extension of survey closure dates in the last three years has allowed most follow-up responses to be received in time to be included in the *Summary Reports* for those surveys. Postsurvey adjustments were greatest for 1990 and 1991 data, much less for 1992, and minimal for 1993. In 1994 response to the racial/ethnic item reached 97 percent by survey closure—the highest rate ever. Any postsurvey adjustments for 1995 data will be included in next year's report, but they are expected to be very slight because of the extended closure. Updated numbers for all recent years appear in Appendix Table B-2 in this report.

*History of the racial/ethnic question:* Although this item was first introduced to the Survey of Earned Doctorates in 1973, over 25 percent of recipients in 1973 and about 13 percent in 1974 either completed earlier questionnaires or provided unusable responses. Since 1975, the racial/ethnic data have been more reliable, with response rates ranging from 90.1 to 97.1 percent (the latter in 1994). The information on race/ethnicity presented in this report is limited to the period 1976 to 1995.

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget (OMB) for use in federally sponsored surveys; an explanation of the effect of these changes is detailed on page 13 of *Summary Report 1977*. (Note: Changes in the OMB guidelines prompted the reclassification of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980 the question was further revised in two ways: (1) the Hispanic category was subdivided into Puerto Rican, Mexican American, and other Hispanic, and (2) respondents were asked to check only one racial category. (Before 1980, doctorate recipients could check more than one category to indicate their race.) The item was modified again in 1982 to separate the questions on race and ethnicity. Since then, respondents have been asked to first check one of the four racial group categories (American Indian, Asian, black, or white) and then indicate whether or not they are Hispanic. *In this report, Ph.D.s who reported Hispanic heritage are classified as Hispanic regardless of their racial designations; the remaining Ph.D.s are then counted in the respective racial groups.* (Note: Doctorate recipients who checked the category "American Indian or Alaskan Native" are identified as "American Indian" in this report.)

***Time to Doctorate***

***Total time to degree (TTD):*** TTD measures the total elapsed time between the baccalaureate and the doctorate (including time not enrolled in school). TTD can be computed only for individuals whose baccalaureate year is known. Baccalaureate year is often obtained from commencement programs or doctorate institutions when not reported by the recipient. *Months are now included in the computation (see note below).*

***Registered time to degree (RTD):*** RTD gauges the time in attendance at colleges and universities between receipt of the baccalaureate and the doctorate. Enrollment may include years of attendance not related to a recipient's doctoral program. RTD can only be computed for individuals who have provided all years of college attendance after the baccalaureate. *Months are now included in the computation (see note below).*

***Note about medians:*** *The method of computing medians has been revised. Beginning with Summary Report 1994, months (of birth, baccalaureate, and doctorate) are included in the calculations whenever available; if months are missing, only years are used in the calculations. (However, medians are not computed for years prior to 1969 because doctorate month is unavailable for all Ph.D.s.) Medians presented in previous Summary Reports were based only on years. Some medians would be the same regardless of the method of computation, but the new method generally computes slightly different results. While differences are small (usually one- or two-tenths of a year), readers should consider these differences when comparing medians presented in this report with those in earlier reports.*

**SURVEY OF EARNED DOCTORATES 1994-95**

Please return this form to the GRADUATE DEAN for forwarding to  
The Office of Scientific and Engineering Personnel, National Research Council • 2101 Constitution Avenue, N.W., Washington, D.C. 20418

Please print or type.

1. Name in full: _____ <div style="display: flex; justify-content: space-between; font-size: small;"> <span>Last Name</span> <span>First Name</span> <span>Middle Name</span> </div> Cross Reference: Maiden name or former name legally changed _____		
2. Permanent address through which you could always be reached: (Care of, if applicable) _____ <div style="display: flex; justify-content: space-between; font-size: small;"> <span>Number</span> <span>Street</span> <span>City</span> </div> <div style="display: flex; justify-content: space-between; font-size: small;"> <span>State</span> <span>Zip Code</span> <span>Or Country if not U.S.</span> </div>		
3. U.S. Social Security Number: _____		
4. Place of birth: _____ <div style="display: flex; justify-content: space-between; font-size: small;"> <span>State</span> <span>or Country if not U.S.</span> </div>		Date of birth: _____ <div style="display: flex; justify-content: space-between; font-size: small;"> <span>Month</span> <span>Day</span> <span>Year</span> </div>
5. Sex: 1 <input type="checkbox"/> Male 2 <input type="checkbox"/> Female		8. Are you a person with a disability? <input type="checkbox"/> Yes <input type="checkbox"/> No If yes, is it: 1 <input type="checkbox"/> Visual 2 <input type="checkbox"/> Orthopedic (mobility) 3 <input type="checkbox"/> Auditory (hearing) 4 <input type="checkbox"/> Vocal 5 <input type="checkbox"/> Other (specify) _____
6. Marital status: 0 <input type="checkbox"/> Single, never married 1 <input type="checkbox"/> Married 2 <input type="checkbox"/> Separated, divorced, widowed		
7. Citizenship: 0 <input type="checkbox"/> United States, native 1 <input type="checkbox"/> United States, naturalized Non-United States: 2 <input type="checkbox"/> Permanent Resident of United States (Immigrant visa) ↳ _____ (Country of present citizenship) 3 <input type="checkbox"/> Temporary Resident of United States (Non-immigrant visa) ↳ _____ (Country of present citizenship)		9. What is your racial background? 0 <input type="checkbox"/> American Indian or Alaskan Native (Check only one.) 1 <input type="checkbox"/> Asian or Pacific Islander 2 <input type="checkbox"/> Black 3 <input type="checkbox"/> White
		10. Are you Hispanic? <input type="checkbox"/> No <input type="checkbox"/> Yes → 0 <input type="checkbox"/> Mexican American 1 <input type="checkbox"/> Puerto Rican 2 <input type="checkbox"/> Other Hispanic
		11. How many dependents do you have? _____ Do not include yourself. (Dependent = someone receiving at least one half of his or her support from you.)

**EDUCATION**

12. Location of high school/secondary school last attended: _____ <div style="display: flex; justify-content: space-between; font-size: small;"> <span>State</span> <span>or Country if not U.S.</span> </div>		Date of graduation from high school: _____ <div style="display: flex; justify-content: space-between; font-size: small;"> <span>Month</span> <span>Year</span> </div>						
13. List below, chronologically, all colleges (including 2-year) and graduate institutions you have attended and each degree earned (if any). Be sure to give the years attended for <u>ALL</u> institutions attended. Include your doctoral institution(s) (and degree) at the end.								
Institution/Branch	State/Country	Years Attended		Field of Study		Degree (if any)		
		From	To	Use Specialties List		Title	Granted	
				Name	Number		Mo	Yr
EXAMPLE Genesee Community College SUNY/ Buffalo	NY NY	79 81	81 83	Math Computer Science	498 400	B.S.	6	83

If a baccalaureate degree (or equivalent) was never received, please check box. ☐

14. How many years were you a full-time student between receiving your first baccalaureate degree (or equivalent) and receiving your doctorate (include the period spent on your thesis and/or dissertation). _____ (whole numbers)	
15. Identify the field of your dissertation research and enter below the title of your dissertation. If a project report or a musical or literary composition is a degree requirement in lieu of a dissertation, please check box <input type="checkbox"/> Name of field _____ Number of field _____ <div style="display: flex; justify-content: space-between; font-size: small;"> <span>Title</span> <span>(Use Specialties List)</span> </div>	
16. Name the department (or interdisciplinary committee, center, institute, etc.) and school or college of the university which supervised your doctoral program. <div style="display: flex; justify-content: space-between; font-size: small;"> <span>Department/Institute/Committee/Program</span> <span>School</span> </div>	

17. Indicate your **primary** and **secondary** sources of support during graduate school by entering "1" or "2" in the appropriate box. Check (✓) all other sources from which support was received, if any. (Enter only one source as "1" and one source as "2.")

889 Teacher Educ., Specific Acad.  
& Voc. Prog., Other\*  
898 Education, General  
899 Education, Other\*

## PROFESSIONAL FIELDS

Business Management and  
Administrative Services

900 Accounting  
905 Banking/Financ. Support Serv.  
910 Business Admin. & Mgmt.  
915 Business/Managerial Economics  
916 International Business  
917 Mgmt. Inf. Sys./Bus. Data Proc.  
920 Marketing Mgmt. & Research  
930 Operations Research  
(See also 363, 465)  
935 Organiz. Behav. (See also 621)  
938 Bus. Mgmt./Admin. Serv., Gen.  
939 Bus. Mgmt./Admin. Serv., Other\*

## Communications

940 Communications Research  
947 Mass Communications  
957 Communication Theory  
958 Communications, General  
959 Communications, Other\*  
(See also 736)

## Other Professional Fields

960 Architec. Environ. Design  
964 Home Economics  
968 Law  
972 Library Science  
974 Parks/Rec./Leisure/Fitness  
976 Public Administration  
980 Social Work  
984 Theol./Relig. Ed. (See also 790)  
988 Professional Fields, General  
989 Professional Fields, Other\*

999 OTHER FIELDS\*

The appendix tables present data according to the following field classifications. Appendix Tables A-1 and A-2 and Appendix Table B-1 display all subfields that are on the survey Specialties List. Appendix Tables A-4, A-5, and A-6 show data by seven broad fields only. Appendix Tables A-3 and A-7 include the additional field groupings indicated below.

## SCIENCES

### Physical Sciences (400-599)

Physics and Astronomy (500-505, 560-579)  
Chemistry (520-539)  
Earth, Atmospheric, and Marine Sciences  
(510-519, 540-559, 580-599)  
Mathematics (420-499)  
Computer Sciences (400-410) } Combined in Table A-7

### Engineering (300-399)

### Life Sciences (000-299)

Biological Sciences (100-199)  
Biochemistry (100)  
Other Biological Sciences (103-199)  
Health Sciences (200-299)  
Agricultural Sciences (000-099)

### Social Sciences (600-699)

Psychology (600-649)  
Economics and Econometrics (666, 668)  
Anthropology and Sociology (650, 686)  
Political Science and International Relations  
(674, 678)  
Other Social Sciences  
(652-662, 670, 672, 682, 690-699) } Combined in Table A-7

## NONSCIENCES

### Humanities (700-799)

History (700-719)  
English and American Language  
and Literature (732-734)  
Foreign Languages and Literature  
(740-769)  
Other Humanities  
(720-729, 736-739, 770-799) } Combined in Table A-7

### Education (800-899)

### Professional and Other Fields (900-999)

Business and Management (900-939)  
Other Professional Fields (940-989)  
Other Fields (999)

**NOTE:** Doctorate recipients indicate their fields of specialty.  
Their choices may differ from departmental names.

## TITLES OF RESEARCH DEGREES INCLUDED IN THE SURVEY OF EARNED DOCTORATES

<b>DA/DAT</b>	<b>Doctor of Arts/Arts in Teaching</b>	<b>DMM</b>	<b>Doctor of Music Ministry</b>
<b>DArch</b>	<b>Doctor of Architecture</b>	<b>DMSc</b>	<b>Doctor of Medical Science</b>
<b>DAS</b>	<b>Doctor of Applied Science</b>	<b>DNSc</b>	<b>Doctor of Nursing Science</b>
<b>DBA</b>	<b>Doctor of Business Administration</b>	<b>DPA</b>	<b>Doctor of Public Administration</b>
<b>DChem</b>	<b>Doctor of Chemistry</b>	<b>DPE</b>	<b>Doctor of Physical Education</b>
<b>DCJ</b>	<b>Doctor of Criminal Justice</b>	<b>DPH</b>	<b>Doctor of Public Health</b>
<b>DCL</b>	<b>Doctor of Comparative Law/Civil Law</b>	<b>DPS</b>	<b>Doctor of Professional Studies</b>
<b>DCrim</b>	<b>Doctor of Criminology</b>	<b>DrDES</b>	<b>Doctor of Design</b>
<b>DED</b>	<b>Doctor of Environmental Design</b>	<b>DRE</b>	<b>Doctor of Religious Education</b>
<b>DEng</b>	<b>Doctor of Engineering</b>	<b>DRec/DR</b>	<b>Doctor of Recreation</b>
<b>DEnv</b>	<b>Doctor of Environment</b>	<b>DSc/ScD</b>	<b>Doctor of Science</b>
